Introduction to Digital Transformation Abbas Strømmen-Bakhtiar, This book aims to inform the non IT specialist about the technological revolution that is taking place and specifically how the digital component of it is affecting our lives. It is hoped that this information will fill possible information gaps in readers' mental model enabling them to make better informed decisions. This book can also be used as a textbook in a stand alone introductory course to the digital revolution and its effects on society. The course could be used in both bachelor and master degree programs in business management, healthcare management, sociology or any other non IT programs.

Chapter 1 This chapter although the longest is a brief review of the interactions between technology, economy and politics. The subject is a much neglected one and I believe that understanding of these interactions is vital for understanding the underlying causes of some of our most important pressing issues. The chapter discusses the interactions between technologies, economy and politics, examining the effect of technologies on economic development and political ideologies.

Chapter 2 This chapter deals with technological revolutions in general and the digital revolution in particular. I shall discuss the components of the digital economy. These being knowledge, digitisation, virtualisation, molecularization, integration, internetworking, disintermediation, convergence, innovation, sharing, economy, immediacy and discordant. In addition we shall examine the disruptors that are changing the face of competition in the marketplace.

Chapter 3 This chapter deals with digital transformation, i.e. the process of using digital technology in all areas of business, changing the way the businesses operate and deliver value to their customers. We shall examine models for dealing with digital transformation.

Chapter 4 We shall examine one of the most important developments of the 21st century, namely the advancements in Artificial Intelligence (AI). We shall look at how the human brain works and what is intelligence. We shall look at the artificial neural networks, machine learning and deep learning. We shall also look at the deployment of AI in various fields such as healthcare, finance, Natural Language Processing (NLP), news media and warfare.

Chapter 5 This chapter deals with one of the most controversial and yet promising developments in finance and distributed secure databases, namely cryptocurrencies and blockchains. This subject is divided into two parts: the first part deals with the cryptocurrencies and their viability as currencies. One of the most popular cryptocurrencies, the Bitcoin, will be examined in depth. The second part is somewhat technical and deals with the inner workings of the blockchains. As with cryptocurrencies, many see a bright future for the blockchains, especially in the form of smart contracts. Many believe that blockchains will be of great value in areas such as finance, handling contracts.

healthcare and more Blockchain promises to bring disintermediation to many industries and thereby reduce costs Chapter 6 Technological revolutions tend to disrupt the lives of many middle aged and older workers New technologies give birth to new industries destroying the old industries in the process New technologies often require special skills that the old industry workers do not possess The laid off workers of the old industries can seldom find jobs in new industries since the new industries often rely on new technologies and skills that the old industry workers do not possess These workers need training something that the prospective employers do not provide Also the new technologies including AI are automating many tasks reducing the need for human workers This chapter discusses the issue of automation and its effect on employment Additionally the type of jobs that are in danger of automation is discussed as well Chapter 7 While chapter six discussed the employment situation chapter seven considers the type of education required by the new industries Also the weaknesses of the existing educational system are considered and alternative systems are proposed Chapter 8 History tells us that whenever there has been a technological revolution it has been accompanied by a shift in power both nationally and internationally The global shift of power has seldom been a peaceful affair It often has resulted in major wars and global reorientation This chapter discusses the possibility of the global shift of power Currently there are not that many countries or entities that can be considered as contenders Of the three Russia European Union and China only one China is considered to have any chance of wresting power from the United States The technological economic and military power of China is compared and contrasted with the United States

A Financial Theory of the Business Cycle Edward W. Fuller, Warren Young, 2025-02-17 A Financial Theory of the Business Cycle presents a new approach to business cycle theory based on the net present value The book develops a novel diagrammatic approach to illustrate how fractional reserve banking systematically distorts net present value calculations In addition to providing fresh insights the new diagrammatic approach provides a comparative framework that can be used to compare pre existing theories including

those of John Maynard Keynes Friedrich Hayek Milton Friedman and Robert E Lucas Jr The net present value is the most important concept in the theory and practice of modern finance As such it is the proper framework for explaining the systematic financial losses that occur during the business cycle Eugen von Böhm-Bawerk and Irving Fisher developed the modern theory of the net present value and the financial theory of the business cycle developed in this book is rooted in their tradition Although financial elements played a central role in their respective theories Keynes and Hayek did not use the net present value This failure created problems that still haunt business cycle theory today This book addresses these problems and attempts to steer financial theories of the business cycle back to the course set by Böhm-Bawerk and Fisher In addition to macroeconomists this book will appeal to financial economists money and banking experts accountants financial analysts and businesspeople generally
