Macroeconomics 2e Charles Jones:

Macroeconomic Theory Jean-Pascal Benassy, 2011-05-12 This graduate textbook is a primer in macroeconomics. It starts with essential undergraduate macroeconomics and develops in a simple and rigorous manner the central topics of modern macroeconomic theory including rational expectations, growth, business cycles, money, unemployment, government policy, and the macroeconomics of nonclearing markets. The emphasis throughout the book is on both foundations and presenting the simplest model for each topic that will deliver the relevant answers. The first two chapters recall the main workhorses of undergraduate macroeconomics: the Solow-Swan growth model, the Keynesian IS-LM model, and the Phillips curve. The next chapters present four fundamental building blocks of modern macroeconomics: rational expectations, intertemporal dynamic models, nonclearing markets, and imperfect competition and uncertainty. Later, the book deals with growth, notably the Ramsey model, overlapping generations, and endogenous growth. Chapter 10 moves to the famous real business cycles (RBC), which integrate in a unified framework growth and fluctuations. The final chapters look at the issue of stabilization: how best to guard the economy from shocks and the connections between politics and the macroeconomy. To make the book self-contained, a mathematical appendix gives a number of simple technical results that are sufficient to follow the formal developments of the book.

Long-Run Growth Forecasting Stefan Bergheim, 2008-03-29 This book explores how to set up an empirical model that helps with forecasting long-term economic growth. GDP forecasts for the years 2006 to 2020 for 40 countries are derived in a transparent way. Offering a systematic approach to models of potential GDP that can also be used for forecasts of more than a decade, it fills the wide gap between the high demand for such models by banks, international organizations, and governments on the one hand and the limited supply on the other hand. Frequent forecast failures in the past (e.g., Japan 1990, Asia 1997) and the heavy economic losses they produced motivated the work. The book assesses the large number of theories of economic growth, the drivers of economic growth, the available datasets, and the empirical methods on offer. A preference is shown for evolutionary models and an augmented Kaldor model. The book uses non-stationary panel techniques to find pair-wise cointegration among GDP per capita and its main correlates.

Macroeconomics Charles I. Jones, 2014 Teaches students how macroeconomics is studied and applied in the 21st century.
