

# Macroeconomics I: European perspective

## Introductory lecture

### Macroeconomics

- The big picture
- What happens to (parts of) entire economies?
- Income, growth, unemployment, inflation, etc.
- Relationships between these variables
- Globalisation
  - o Goods, services, capital, people
- Economic shocks
- Government policies
- Importance of institutions
  - o European Union, exchange rate mechanism, labour markets, etc.

### Output and time

"The most important goal of macroeconomics is to develop an understanding of what makes income differ between countries and what makes them grow or fluctuate over time" (Gartner, p. 36)

- Analysing equilibrium
- Comparing equilibriums
- How do countries move between equilibriums?
- Different time frames
  - o Different processes
  - o Different variables
  - o Different policies

### Short and long run

- Analysis and explanations depend on time frame
- Key: what do we assume about prices?

Quantity equation  $M \times V = P \times Y$

(V assumed fixed)

Long run: Y determined by production factors  $\Delta M = \Delta P$

Short run: Y determined by M

$\Delta M = \Delta Y$  P assumed fixed

### Aggregate supply curve

Two cases:

Y-axis = Output = GDP

**Price and Financial Stability** David Harrison, 2018-05-15 Why are financial prices so much more crisis prone and unstable than real economy prices Because they are doing different things Unlike real economy prices rooted in the real goods and services produced and exchanged financial prices attempt to value future income flows from financial and capital assets These valuations fluctuate erratically because expectations of the future fluctuate and large liquid financial markets can amplify rather than correct these effects The book builds on the insights of economists Frank Knight and John Maynard Keynes that uncertainty of the future is essential to understand the processes of economic production and capital investment and adds to this Karl Popper's general explanation of how expectations of an uncertain future are formed and tested through a trial and error process Rather than relying on fluctuating financial prices to provide a guide to an uncertain future it suggests a better approach would be to adopt the methods common to other branches of science and create testable falsifiable theories allowing reasonable predictions to be made In finance the elements of one such theory could be based on the concept of forecasting yield from capital assets which is a measurable phenomenon tending towards aggregate and long term stability and where there is a plentiful supply of historic data By

methods like this financial economics could become a branch of science like any other To buttress this approach the widely accepted public policy objective of promoting real economy price stability could be widened to include financial price stability

*Macroeconomics* David C. Colander,1997-08      *Macroeconomic Theory and the Eurozone Crisis* Alain Alcouffe,Maurice Baslé,Monika Poettinger,2018-10-11 The financial crisis of 2007 required the economics discipline to thoroughly re evaluate its prevailing theories about economic cycles and economic growth With a focus on Europe this volume identifies the latest strands of research on business cycles monetary theory the evolution of social policies and public spending and the institutional context of the European Union It also considers whether these new ideas could have helped us avoid the crisis and how they might reshape the current economic paradigm This book will be of interest to advanced students and researchers in European economics macroeconomics and economic history      *China in the Global Economy Income Disparities in China An OECD Perspective* OECD,2004-09-21 China has experienced spectacular economic growth since 1978 averaging 8 to 9% per year However economic disparities have also widened very significantly This book presents papers exploring the causes      *Nouvelles universitaires européennes* ,1997      **European Economists of the Early 20th**
