

- Infusion rate (or use of the infusion rate table) should be specified by the HCP after patient assessment.
- **Maximum** infusion rates at specific intervals **should not be exceeded**.
- Monitor infusion with desired rate-related symptoms such as headache, arm/leg pain and BP changes.
- Advise the patient with each rate change. Nursing staff may revert to a previously tolerated rate if the patient demonstrates symptoms. If symptoms resolve with rate decrease, a transfusion reaction investigation is not required.

- High infusion rates **should not** be used for patients at risk for renal impairment, elderly patients, or those with a history of hypertension, cardiovascular disease, previous thrombotic events or dehydration as they are at increased risk of thrombus formation.
