**An Introduction to Mechanics** Daniel Kleppner, Robert Kolenkow, 2013-11-18 For 40 years Kleppner and Kolenkow's classic text has introduced students to the principles of mechanics. Now brought up to date, this revised and improved second edition is ideal for classical mechanics courses for first and second year undergraduates with foundation skills in mathematics. The book retains all the features of the first edition including numerous worked examples, challenging problems, and extensive illustrations, and has been restructured to improve the flow of ideas. It now features new examples taken from recent developments such as laser slowing of atoms, exoplanets, and black holes. A Hints, Clues, and Answers section for the end of chapter problems to support student learning, and a solutions manual for instructors at [www.cambridge.org/kandk](http://www.cambridge.org/kandk)

Weld, Johan De Kleer, 2013-09-17 *Readings in Qualitative Reasoning about Physical Systems* describes the automated reasoning about the physical world using qualitative representations. This text is divided into nine chapters, each focusing on some aspect of qualitative physics. The first chapter deals with qualitative physics, which is concerned with representing and reasoning about the physical world. The goal of qualitative physics is to capture both the commonsense knowledge of the person on the street and the tacit knowledge underlying the quantitative knowledge used by engineers and scientists. The succeeding chapter discusses the qualitative calculus and its role in constructing an environment that includes behavior over both mythical time and elapsed time. These topics are followed by reviews of the mathematical aspects of qualitative reasoning, history-based simulation, and temporal reasoning, as well as the intelligence in scientific computing. The final chapters are devoted to automated modeling for qualitative reasoning and causal explanations of behavior. These chapters also examine the qualitative kinematics of reasoning about shape and space. This book will prove useful to psychologists and psychiatrists.
