### **Klir And Yuan Solutions Fuzzy Logic:**

Soft Computing and Intelligent Data Analysis in Oil Exploration M. Nikravesh, L.A. Zadeh, Fred Aminzadeh, 2003-04-22

This comprehensive book highlights soft computing and geostatistics applications in hydrocarbon exploration and production combining practical and theoretical aspects. It spans a wide spectrum of applications in the oil industry crossing many discipline boundaries such as geophysics, geology, petrophysics, and reservoir engineering. It is complemented by several tutorial chapters on fuzzy logic, neural networks, and genetic algorithms and geostatistics to introduce these concepts to the uninitiated. The application areas include prediction of reservoir properties, porosity, sand thickness, lithology, fluid, seismic processing, seismic and bio stratigraphy, time lapse seismic, and core analysis. There is a good balance between introducing soft computing and geostatistics methodologies that are not routinely used in the petroleum industry and various applications areas. The book can be used by many practitioners such as processing geophysicists, seismic interpreters, geologists, reservoir engineers, petrophysicist, geostatisticians, asset managers, and technology application professionals. It will also be of interest to academics to assess the importance of and contribute to R D efforts in relevant areas.

### **Fuzzy Relational Calculus:**

**Theory, Applications And Software (With Cd-rom)** Yordan Kostadinov Kyosev, Ketty Georgieva Peeva, 2005-01-06. This book examines fuzzy relational calculus theory with applications in various engineering subjects. The scope of the text covers unified and exact methods with algorithms for direct and inverse problem resolution in fuzzy relational calculus. Extensive engineering applications of fuzzy relation compositions and fuzzy linear systems, linear relational and intuitionistic, are discussed. Some examples of such applications include solutions of equivalence reduction and minimization problems in fuzzy machines, pattern recognition in fuzzy languages, optimization and inference engines in textile and chemical engineering, etc. A comprehensive overview of the authors' original work in fuzzy relational calculus is also provided in each chapter. The attached CD Rom contains a toolbox with many functions for fuzzy calculations together with an original algorithm for inverse problem resolution in MATLAB. This book is also suitable for use as a textbook in related courses at advanced undergraduate and graduate levels.

### **The Theory of Problem-Solution Dualities and Polarities** Kofi Kissi

Dompere, 2022-04-25. This book is concerned with the development of the understanding of the relational structures of information, knowledge, decision, choice, processes of problems and solutions in the theory and practice regarding diversity and unity, principles of knowing, science, non science, and information, knowledge systems through dualistic, polar conditions of variety, existence and nonexistence. It is a continuation of the sequence of my epistemic works on the theories on fuzzy, rationality, info statics, info dynamics, entropy, and their relational connectivity to information, language, knowing, knowledge, cognitive practices, relative to variety, identification, problem solution, dualities, variety transformation, problem solution, dualities, and variety, certainty, uncertainty, principle in all areas of knowing and human actions regarding general social transformations. It is also an economic theoretic approach in understanding the diversity and unity of knowing and science.

through neuro decision choice actions over the space of problem solution dualities and polarities The problem solution dualities are argued to connect all areas of knowing including science and non science social science and non social science into unity with diversities under neuro decision choice actions to support human existence and nonexistence over the space of static dynamic dualities The concepts of diversity and unity are defined and explicated to connect to the tactics and strategies of decision choice actions over the space of problem solution dualities The concepts of problem and solution are defined and explicated not in the space of absoluteness but rather in the space of relativity based on real cost benefit conditions which are shown to be connected to the general parent offspring infinite process where every solution generates new problem s which then generates a search for new solutions within the space of minimum maximum dualities in the decision choice space under the principle of non satiation over the space of preference non preference dualities with analytical tools drawn from the fuzzy paradigm of thought which connects the conditions of the principle of opposites to the conditions of neuro decision choice actions in the zone of variety identifications and transformations The Monograph would be useful to all areas of Research Learning and Teaching at Advanced Stages of Knowing and Knowledge Production
