

Polysomnography and Quantitative Sleep EEG Analysis

Steps: **Preprocessing:** Electrical and movement artifacts were visually removed.

Spectral Analysis: The absolute spectral power was determined and averaged separately during N1 and REM sleep in delta, theta, alpha, and beta frequency ranges.

Sleep-SW (slow wave) and Sleep Spindle Event Detection: A custom-made MATLAB script was used.

SW Locked Sleep Spindle Phase-Amplitude Coupling: The Hilbert transformation was used to calculate the instantaneous phase angle of the SW events. The CircStat toolbox in MATLAB was used to detect the maximum spindle amplitude and corresponding SW phase angle. Mean SW phase angle in degrees was calculated by averaging across the duration of the combined N2 and N3 epochs.

SW-Spindle Co-occurrence Percent: All events where the center of the spindle was within a SW event were detected and the percentage was averaged over the combined N2 and N3 epochs.

REM sleep behavior disorder (RBD): **ESB% episodes** (1 epoch = 30 sec) of REM sleep meeting criteria for RBD sleep without audio and enactment of dreams observed or reported.

Level II Neuro-cognitive Battery
