Manual of Clinical Chemistry (Classic Reprint) Elias Hudson Bartley, 2015-06-28 Excerpt from *Manual of Clinical Chemistry*. The student should refer to the descriptive part of the text book for the subjects treated of here. The Carbohydrates 1. Note the general appearance of the specimens of grape sugar or dextrose, dextrin and starch which are passed around. 2. Put some of each into cold water. Starch is insoluble; dextrose and dextrin slowly dissolve but more readily in hot water. 3. Apply Trommer's Test for Dextrose. Put a few drops of copper sulphate solution into a test tube, then solution of dextrose, and then strong sodium hydroxide. On adding the NaOH a precipitate is first formed which on adding more redissolves forming a blue solution. On boiling this a yellow or red precipitate, cuprous hydrate or oxide, forms. 4. Dextrin. Add iodine solution to the solution of dextrin and a reddish brown color is produced. The color disappears on heating. 5. Starch. a. Examine microscopically the scrapings from the surface of a freshly cut potato. Note the appearance of the starch grains with their concentric markings. See table p. 369 b. On boiling starch with water an opalescent solution is formed which if strongly gelatinizes on cooling. c. Add iodine solution. An intense blue color is produced which disappears on heating and if not heated too long reappears on cooling. N. B. Prolonged heating drives off the iodine and consequently no blue color returns on cooling. d. Conversion into dextrin and dextrose. About the Publisher.
