Solar Powered Wastewater Recycling Arun Kumar, Sandhya

Prajapati, 2023-07-14 The United Nations predicts that by the year 2025 two thirds of the world's population will face water scarcity. Further, the planet would have well over eight billion people, the majority of whom would live in developing countries where more than 80% of those are already experiencing water scarcity. Therefore, there is an urgent need for wastewater recycling to help solve issues of scarcity and to facilitate better management of generated wastewater. Water recycling includes reuse and treatment of municipal wastewater, which could be a sustainable approach for environmental sustainability and could also help to offset the increasing water demands for irrigation and industrial and other needs. Currently, water and wastewater treatment facilities consume large amounts of energy that are mainly generated through the use of fossil fuels. Solar Powered Wastewater Recycling examines how solar power can be implemented as an integrated approach whereby all the energy needs of the water and wastewater sector could be supplemented by renewable technologies and in which a synergy can be developed between water and energy.

Application of Low Cost Ceramic Membranes in Wastewater Treatment Sibdas Bandyopadhyay, 2025-05-01

This book reviews the status of developing tailor-made low cost membranes and membrane-based separation processes for applications in wastewater treatment. It also presents an overview of industry-specific case studies upholding the waste-to-resource strategy for utilization of low cost ceramic membranes in industrial wastewater treatment. This book highlights methods, results, and examples demonstrating that low cost ceramic membranes possess similar features and advantages comparable to the commercially available ceramic membranes, thereby minimizing the prohibitive cost of their usage in wastewater treatment. Thus, the readers who are looking for more economical alternatives for wastewater treatment can be introduced with the cheaper membrane materials. It also discusses the selection and method of application of such membranes in the treatment processes. This book can serve as a valuable reference for researchers and professionals interested in wastewater treatment and allied fields.
