Masticatory Muscles Activities in Temporomandibular Joint Internal Derangement Chantal M. Lafrenière, 1995

Intramuscular EMG of the lateral pterygoid muscles surface EMG of the temporalis and masseter muscles electrogoniometry and force measurements of the TMJ were synchronously used to investigate the biomechanical role of the two portions of the

lateral pterygoid muscle in relation to internal derangement ID of the temporomandibular joint TMJ This study dealt with the EMG analysis of five static conditions resting resisted protraction maximum voluntary contraction MVC in opening in molar and incisor clenching of TMJ ID and control subjects The analysis of variance results of the integrated linear envelop LE EMG showed no significant differences between the two groups The integrated LE EMG of the SLP was significantly lower in the TMJ group during molar clenching $104 \mu V$ pm 60 0 over $159 \mu V$ pm 68 8 for a $p = 0.020$ The SLP seemed to have lost its discal stabilizing function during clenching The integrated LE EMG signals of the ILP were significantly higher in the TMJ ID group during rest resisted protraction and incisor clenching $p = 0.029$ $p = 0.046$ $p = 0.031$ respectively The ILP muscle has probably adapted to control the inner joint instability while continuing its own actions The results of the isometric forces showed that TMJ ID subjects exhibited significantly lower molar bite forces 297 N over 419 N $p = 0.042$ confirming that they have less muscle strength and tissue tolerance than subjects with healthy masticatory muscle system Incisor bite forces however showed a tendency to be higher in the TMJ ID group 233 N over 180.5 N $p = 0.168$ possibly resulting from the training of a protracted bite and or hyperactivity of the ILP associated with ID Therefore a neuromuscular adaptation could be occurring in TMJ ID masticatory system affecting muscular actions and forces Abstract shortened by UMI

Fallproof! Debra J. Rose, 2010 The second edition of FallProof continues to be the only text to address the multiple dimensions that contribute to balance and mobility By exploring the reasons underlying falls readers gain the knowledge to offer more comprehensive assessment and programming This research based approach is field tested and has shown considerable success in a range of instructional settings including community based and residential care environments The FallProof program is customizable for individual clients with exercise progressions for early middle and late class modules In addition it offers the following benefits Flexibility Program participants can engage in group activities that take into account their individual abilities so that the program is not too easy or too difficult for them Guidance Safe and easy ways of presenting each of the program's exercise components are illustrated addressing issues ranging from safety concerns to the best ways to offer feedback to participants Supplemental materials Reproducible health assessment and program related questionnaires help instructors gather crucial information for effective programming Results The FallProof program has been proven to reduce the risk of falling in participants who've completed one or more rotations of the program Now packaged with a DVD this second edition makes the information in the text applicable to real situations The bound in DVD shows how to administer key screening and assessment tests demonstrates selected exercise progressions for the major program modules and features a sample FallProof class session in action
