

From May 1998 to May 1999, 1000 patients were recruited from 100 general practices in the south of England. The patients were recruited by telephone and were asked to participate in the study if they were aged 16 years or over, had no known chronic disease, and were not taking any regular medication. The patients were recruited to the study by a research nurse who was not involved in their primary care. The patients were recruited to the study by a research nurse who was not involved in their primary care.
