Manual Open Office Base:

The Tiny Guide to OpenOffice.org Benjamin Horst, 2004 Annotation Home and educational computer users and company IT groups that are considering widespread deployment of OpenOffice.org will use this succinct reference to make more efficient use of the suite. The three major platforms are covered in detail: Windows, Linux, and Mac OS X, making this the essential starter's guide to acquiring and using the suite. Each component (Writer, Calc, Impress, Draw, Data Source, tools, Web, and the Formula tool) is treated to a thorough yet concise collection of how-to topics providing everything needed to become proficient OpenOffice users. Software Applications: Concepts, Methodologies, Tools, and Applications Tiako, Pierre F., 2009-03-31 Includes articles in topic areas such as autonomic computing, operating system architectures, and open source software technologies and applications. Emerging Free and Open Source Software Practices Sowe, Sulayman K., Stamelos, Ioannis G., Samoladas, Ioannis, 2007-06-30 This book is a collection of empirical research regarding the status of F/OSS projects, presenting a framework and state-of-the-art references on F/OSS projects, reporting on case studies covering a wide range of F/OSS applications and domains. It asserts trends in the evolution of software practices and solutions to the challenges ubiquitous nature of free and open source software provides. Provided by publisher. **Practical Research and Evaluation** Lena Dahlberg, Colin McCaig, 2010-04-22 This book is a starter DIY text for practitioners who are looking to conduct evaluation studies and research as part of their own professional practice. The growing emphasis on evidence-based practice means that there is an increasing need for practitioners to have at least a basic understanding of research, be aware of methodological pitfalls, and to be updated on new methods. This book provides a practical, user-friendly guide to social science research methods for professionals who have benefited from little if any formal research methods training but find themselves in a role that requires them to read and understand complex research findings and carry out their own research as part of their professional practice. Practical Research and Evaluation is aimed at practitioners working in education, health, social care, and community work. Many in this market are non-graduates or are those whose study did not contain a research element but are required to know how research works. This book has three main aims which will benefit this audience: to enable readers to carry out small-scale research projects of their own; provide them with the basic understanding necessary to commission research; and enable them to better understand and evaluate critically research reports. This book is designed specifically for Do It Yourself researchers working in the public or voluntary sectors. It is accessible and relevant to practitioners, uses non-technical language wherever possible, and employs grounded examples, practical tips, checklists, and readings lists throughout.
