

BUSHING PUMP

Introduction

The DAWRA series of engines, equipped with a bushing pump, is designed to provide a reliable and efficient means of lubrication for the engine and its components. The pump is a positive displacement pump, which means that it delivers a fixed volume of oil per revolution of the crankshaft.

Each pump is equipped with a series of check valves to prevent oil from flowing back into the crankcase when the pump is not operating. This prevents oil from being lost and ensures that the pump is always full of oil.

The pump is also equipped with a series of check valves to prevent oil from flowing back into the crankcase when the pump is not operating. This prevents oil from being lost and ensures that the pump is always full of oil.

For more information on the pump, see the DAWRA series of engines, which are available in a variety of sizes and configurations.
