Albert Weideman, John Read, Theo du Plessis

March 2014 Matric Maths Paper Caps:

Assessing Academic Literacy in a Multilingual Society Albert Weideman, John Read, Theo du Plessis, 2020-11-02 South African universities face major challenges in meeting the needs of their students in the area of academic language and literacy. The dominant medium of instruction in the universities is English and to a much lesser extent Afrikaans but only a minority of the national population are native speakers of these languages. Nine other languages can be media of instruction in schools which makes the transition to tertiary education difficult enough in itself for students from these schools. The focus of this book is on procedures for assessing the academic language and literacy levels and needs of students not in order to exclude students from higher education but rather to identify those who would benefit from further development of their ability in order to undertake their degree studies successfully. The volume also aims to bring the innovative solutions designed by South African educators to a wider international audience.

Civics for the World to Come Nicole Mirra, Antero Garcia, 2023-07-25 Help students use their voices to build an equitable and just society. Years of political violence and protests against injustice have revived interest in teaching civics in schools. The problem: Civic education as it currently exists privileges systems not students. It promotes incremental change within a broken democracy rather than responding to the youth-led movements that call for the abolition of inequitable social structures. What will it take to prepare young people for the just future they are fighting for? Civics for the World to Come offers educators a framework for designing the critical civic education that our students deserve. Synthesizing perspectives on democratic life from critical race theory, ethnic studies, Afrofuturism, and critical literacy, the book presents key practices for cultivating youth civic agency grounded in equity and justice. The authors explore five world-building civic skills: Inquiry, Storytelling, Imagination, Networking, and Advocacy, and introduce readers to real learning communities where students and educators are transforming themselves and society.

Drawing for Science Education Phyllis Katz, 2017-03-23 This book argues for the essential use of drawing as a tool for science teaching and learning. The authors are working in schools, universities, and continual science learning (CSL) settings around the world. They have written of their experiences using a variety of prompts to encourage people to take pen to paper and draw their thinking: sometimes direct observation and in other instances their memories. The result is a collection of research and essays that offer theory, techniques, outcomes, and models for the reader. Young children have provided evidence of the perceptions that they have accumulated from families and the media before they reach classrooms. Secondary students describe their ideas of chemistry and physics. Teacher educators use drawings to consider the progress of their undergraduates' understanding of science teaching and even their moral/ethical responses to teaching about climate change. Museum visitors have drawn their understanding of the physics of how exhibit sounds are transmitted. A physician explains how the history of drawing has been a critical tool to medical education and doctor/patient communications. Each chapter contains samples, insights, and where applicable, analysis techniques. The chapters in this book should be helpful to

researchers and teachers alike across the teaching and learning continuum The sections are divided by the kinds of activities for which drawing has historically been used in science education An instance of observation Audubon Linnaeus A process how plants grow over time what happens when chemicals combine Conceptions of what science is and who does it Images of identity development in science teaching and learning
