**White Paper on Science and Technology**

,2015      **Understanding West Africa's Ebola Epidemic** Ibrahim Abdullah, Ismail Rashid, 2017-10-15 From 2013 to 2015 over 11 000 people across West Africa lost their lives to the deadliest outbreak of the Ebola virus in history. Crucially, this epidemic marked the first time the virus was able to spread beyond rural areas to major cities, overturning conventional assumptions about its epidemiology. With backgrounds ranging from development to disease control, the contributors to this volume, some of them based in countries affected by the Ebola epidemic, consider the underlying factors that shaped this unprecedented outbreak. While championing the heroic efforts of local communities and aid workers in halting the spread of the disease, the contributors also reveal deep structural problems in both the countries and humanitarian agencies involved, which hampered the efforts to contain the epidemic. Alarming, they show that little has been learned from these events, with health provision remaining underfunded and poorly equipped to deal with future outbreaks. Such issues, they argue, reflect the wider challenges we face in tackling epidemic disease in an increasingly interconnected world.      Intellectual Property Issues in Life Sciences Chetan Keswani, Cristina Possas, 2024-11-15 *Intellectual Property Issues in Life Sciences: Disputes and Controversies* highlights emerging legal, social, and regulatory issues pertaining to various areas of life sciences. Patents occupy a prominent position in the innovation systems in the life sciences, but to what extent they support or hinder innovation is widely disputed. Life science is a broad subject including agriculture, ecology, microbiology, plant and animal sciences, health, and diseases, biotechnology, etc. However, despite the broad applications of biotechnology and molecular biology techniques, profits on investments are surprisingly low. Thus, it is vitally important for universities, public research organizations, and private enterprises to protect their innovations. There are vast differences of opinion on patentability of living organisms, which are largely barred from patent protection. However, mind sets are rapidly shifting, and IP issues in life sciences are receiving increasing attention. To compete with progressive bio-based economies, the developing countries are amending their IP laws to encourage investment. An effort has been made to avoid considering policy in isolation but rather to emphasize the interplay between the policy mix, the wider institutional setting, market forces, and system organization solutions. Both empirical and conceptual chapters are included to bring them together and to yield facts and interpretations for the readers. This book presents expert opinions by frontier academicians, researchers, and attorneys on the recent challenges in the rapidly evolving life science industry. The present book offers comprehensive knowledge on the contemporary issues in life sciences to a wide range of audiences, including students, scholars, researchers, legal practitioners, policymakers, and others interested in emerging intellectual property issues. Features: The only compilation available on the contemporary intellectual property issues in life sciences in the post-COVID era. Focuses on the commercial, regulatory, bioethical, and socio-legal implications of patents in life sciences. Describes an integrated approach for sustained innovations in various areas of life sciences. Discusses the recent IP controversies in a pan-global context. Presents viewpoints to front-line practitioners, viz. attorneys, researchers, etc.      **Rethinking Research Methods in an Age of Digital Journalism** Michael
