GENERAL DESCRIPTION

Henry J models are equipped with a single plate, dry-disc type clutch mounted on the engine flywheel. When engaged, the clutch disc is pressed against the flywheel by the spring loaded clutch pressure plate. The disc, splined to the transmission drive pinion shaft, includes the clutch facings and is designed to cushion shock and chatter through damper springs around the disc hub.

The pressure plate assembly is bolted directly to the flywheel. It contains three levers which operate in parallel to disengage the clutch when actuated by the clutch release mechanism.

Two types of pressure plates are used interchangeably in the Henry J models; they will be identified

in this manual as three and six spring pressure plates. Both pressure plates have been proven through test to have equal durability, performance and a long service life when properly installed and adjusted.

Differences in appearance will readily identify the type of pressure plate used. The most prominent difference being in the shape of the covers and the number of springs used (Fig. 104 and 105).

The clutch assembly is actuated through linkage from the clutch pedal to a release fork mounted in the clutch housing. A clutch release bearing and sleeve assembly is moved by the clutch release fork to engage the pressure plate levers when the clutch pedal is depressed. An pressure is applied to the pedal the pressure plate levers are moved inward by the release bearing and the pressure plate is moved away from the
