Great Britain. Parliament. House of Commons, 2013 **Making it tangible. Learning outcomes in science education** Sascha Bernholt, Knut Neumann, Peter Nentwig, 2012 One of the central features in current educational reforms is a focus on learning outcomes Many countries have established or revised standards to describe what teachers are supposed to teach and students are expected to learn More recently the emphasis has shifted to considerations of how standards can be operationalized in order to make the outcomes of educational efforts more tangible This book is the result of a symposium held in Kiel that was arranged by two science education groups one at the IPN Leibniz Institute for Science and Mathematics Education at the University of Kiel in Germany and the other at the University of York UK The seminar brought together renowned experts from 12 countries with different notions of the nature and quality of learning outcomes The aim was to clarify central conceptions and approaches for a better understanding among the international science education community The book is divided into five parts In Part A the organizers set the scene describing the rationale for arranging the symposium Part B provides a broad overview about different approaches challenges and pitfalls on the road to the clarification of meaningful and fruitful learning outcomes The set of papers in Part C provides deep insights into different although comparable approaches which aim to frame to assess and to promote learning and learning outcomes in science education Smaller projects are presented as well as broad coordinated national programs The papers in Part D outline the individual historical development from different national perspectives reflecting the deficits and problems that led to current reforms Finally a summary of the organizers analyses the conclusions from different vantage points **What Does This Look Like in the Classroom?: Bridging the gap between research and practice** Carl Hendrick, Robin Macpherson, 2017-09-26 Educators in the UK and around the world are uniting behind the need for the profession to have access to more high quality research and evidence to do their job more effectively But every year thousands of research papers are published some of which contradict each other How can busy teachers know which research is worth investing time in reading and understanding And how easily is that academic research translated into excellent practice in the classroom In this thorough enlightening and comprehensive book Carl Hendrick and Robin Macpherson ask 18 of today's leading educational thinkers to distill the most up to date research into effective classroom practice in 10 of the most important areas of teaching The result is a fascinating manual that will benefit every single teacher in every single school in all four corners of the globe *Information Systems for You* Stephen Doyle, 2001 Combined with information systems for you Skillbuilder this text and supporting pack will provide you and your students with all you need for GCSE ICT and coursework
