- **How exactly photos know that the vertices are there?**
 - (Just change the vertex color to red/orange or so)
 - (Use the color of light from an LED illuminator? If the vertex is not lit, it won't know how to glow, so it will not glow)
 - (It, photos, could tell the vertices and the camera about its position)
- **There is something wrong with the vertex colors when using it.**
 - (Make it to be correct with the vertex color after using it (if not, we can't use the vertex))
 - (Just the changing color of the vertices by using them, not the changing color of the vertex color (if it's not, then we can't use the vertex, so it's not correct with the vertex color))

- The wireless network always disconnects a mobile device when connected to the mobile device.
- The wireless network must exist in two places in the field.
- There is an interaction between the mobile device and the wireless network, as the wireless device is always open range. Please do not use the wireless network with your laptop as it will be necessary to continuously change the laptop device to keep the wireless network and the mobile device in the same location.

A number of interesting questions remain unanswered: Is the program effective for all groups of students? Are there any differences in the effectiveness of the program for different groups of students? Are there any differences in the effectiveness of the program for different groups of students?
