Huston, 2025-06-25 This book describes the behavior underlying principles and design of self-healing materials, structures, machines, and systems Self-healing is a ubiquitous phenomenon that appears in many systems ranging from the molecular scale up through to large macroscale systems and in domains ranging from materials such as self-healing polymers to self-sealing tires, water distribution networks and information systems including control systems for damaged aircraft Self-healing extends performance and endurance in ways that are just not possible otherwise This book presents a unifying holistic approach to the operation and design of self-healing systems It acts as a valuable reference for students, researchers and engineers that are interested in understanding self-healing mechanisms and acquiring techniques to extend the performance and endurance of the structures, machines, and systems that they build design and study Key Features Describes the design, operating principles, manufacture and performance assessment of self-healing materials, structures, machines, and systems Presents a unique holistic approach to the engineering and inclusion of self-healing into structures, machines, and systems Topics covered includes materials, machines, vessels, structures, networks, and systems with detailed discussions of polymers, concrete, machinery, pressure vessels, fuel tanks, knives, clothing, lasers, biohybrids, networks, and information systems

Active Learning: Theoretical Perspectives, Empirical Studies and Design Profiles Robert Cassidy, Elizabeth S. Charles, James D. Slotta, Nathaniel Lasry, 2019-07-11 This book represents the emerging efforts of a growing international network of researchers and practitioners to promote the development and uptake of evidence-based pedagogies in higher education at something of a level approaching large-scale impact By offering a communication venue that attracts and enhances much-needed partnerships among practitioners and researchers in pedagogical innovation, we aim to change the conversation and focus on how we work and learn together, i.e. extending the implementation and knowledge of co-design methods In this first edition of our Research Topic on Active Learning, we highlight two of the three types of publications we wish to promote First are studies aimed at understanding the pedagogical designs developed by practitioners

in their own practices by bringing to bear the theoretical lenses developed and tested in the education research community. These types of studies constitute the practice pull that we see as a necessary counterbalance to knowledge push in a more productive pedagogical innovation ecosystem based on research/practitioner partnerships. Second are studies empirically examining the implementations of evidence-based designs in naturalistic settings and under naturalistic conditions. Interestingly, the teams conducting these studies are already exemplars of partnerships between researchers and practitioners who are uniquely positioned as in between straddling the two worlds. As a result, these publications represent both the rigours of research and the pragmatism of reflective practice. In forthcoming editions, we will add to this collection a third type of publication: design profiles. These will present practitioner-developed pedagogical designs at varying levels of abstraction to be held to scrutiny amongst practitioners, instructional designers, and researchers alike. We hope by bringing these types of studies together in an open access format that we may contribute to the development of new forms of practitioner/researcher interactions that promote co-design in pedagogical innovation.
