Lean Thinking James Womack:

Lean Thinking James P. Womack, Daniel T. Jones, 2013-09-26 *Lean Thinking* was launched in the fall of 1996 just in time for the recession of 1997. It told the story of how American, European, and Japanese firms applied a simple set of principles called lean thinking to survive the recession of 1991 and grow steadily in sales and profits through 1996. Even though the recession of 1997 never happened, companies were starving for information on how to make themselves leaner and more efficient. Now we are dealing with the recession of 2001 and the financial meltdown of 2002. So what happened to the exemplar firms profiled in *Lean Thinking*? In the new fully revised edition of this bestselling book, those pioneering lean thinkers are brought up to date. Authors James Womack and Daniel Jones offer new guidelines for lean thinking firms and bring their groundbreaking practices to a brand new generation of companies that are looking to stay one step ahead of the competition.

Lean Thinking James P. Womack, Daniel T. Jones, 2003-06-10 Revised, updated, and more relevant than ever, the bestselling business classic by two internationally renowned management theorists shows how companies of all sizes can become the most efficient organizations possible. 20 charts.

Lean Solutions Daniel T. Jones, James P. Womack, 2013-09-12 A massive disconnect exists today between consumers and providers. As consumers, we have a greater selection of higher quality goods and services to choose from, yet our experience of obtaining and using these items is more frustrating than ever. At the same time, companies find themselves with declining customer loyalty, greater challenges in fulfilling orders, and a general sense of dissatisfaction in connecting with their customers. In *LEAN SOLUTIONS*, lean production experts Womack and Jones show consumers and companies alike how they can align their goals to achieve greater value with less waste.

Womack, 2011-01-01 The life of lean is experiments. All authority for any sensei flows from experiments on the gemba, the place where work takes place, not from dogmatic interpretations of sacred texts or the few degrees of separation from the founders of the movement. In short, lean is not a religion but a daily practice of conducting experiments and accumulating knowledge. So writes Jim Womack, who over the past 30 years has developed a method of going to visit the gemba at countless companies and keenly observing how people work together to create value. Over the past decade, he has shared his thoughts and discoveries from these visits with the Lean Community through a monthly letter. With *Gemba Walks*, Womack has selected and reorganized his key letters as well as written new material providing additional context. *Gemba Walks* shares his insights on topics ranging from the application of specific tools to the role of management in sustaining lean, as well as the long-term prospects for this fundamental new way of creating value. Reading this book will reveal to readers a range of lean principles as well as the basis for the critical lean practice of go see, ask why, and show respect. Womack explains why companies need fewer heroes and more farmers who work daily to improve the processes and systems needed for perfect work and who take the time and effort

to produce long term improvement how good people who work in bad processes become as bad as the process itself how the real practice of showing respect comes down to helping workers frame and solve their own problems how the short term gains from lean tools can be translated to enduring change from lean management how the lean manager has a restless desire to continually rethink the organization s problems probe their root causes and lead experiments to test the best currently known countermeasures By sharing his personal path of discovery Womack sheds new light on the co

Strategic Lean Thinking and Value Management for Gravel Roads in Zambia Richard Kasongo, 2015-11-25 Doctoral Thesis Dissertation from the year 2015 in the subject Engineering General course Civil Engineering Management Construction Project Management language English abstract This research topic is entitled Strategic Lean Thinking and Value Management for Gravel Roads The study captured 82 respondents as research sample to a case study of Output Performance Based Contracts OPRCs for the Construction and Maintenance of Gravel Roads in Zambia Purposive sampling was used as most research participants were drawn from second generation OPRCs that were active between 2009 and 2014 The study was aimed at devising new Construction and Maintenance Contract methods for gravel roads that are based on Lean Thinking and Value Management philosophies in Zambia The established epistemological background to the study is that most of the Zambian road network is of gravel or earth standards and is therefore imperative that they are well maintained to attain desired service levels to properly serve the intended beneficiaries the road users The Road Development Agency Annual Report of 2009 indicated that 33 000 Km of the total 40 671 Km core road network is classified as gravel roads unpaved which are at the moment mostly in a deteriorated state The study revealed that currently in Zambia Gravel Road Construction projects are commonly being realised through the use of traditional Contracts such as admeasured by the use of Bills of Quantities BOQs the Lump sum and Cost plus etc These are mainly short term form of Contracts which to some extent lack some components of sustainable maintenance regimes thereby rendering the Government and other Promoters efforts futile as gravel roads sooner or later deteriorate just after the first rain season upon their construction This was theoretical perspective which served as driver to the Research problem The study noted that current forms of Contracts did not inspire aspire and spur the spirit of ownership as the local people were left out in the planning and design stages of gravel road projects Despite all the attempts made by Government through the RDA and other implementing Agencies the Road Construction Industry in general has failed to get the best value for money through the use of these conventional types of Contracts One of the reasons for this failure according to Womack and Jones 2003 is that it is hard to define and realise value this is partly because most Producers Road Contractors want to make what they are already making and partly because Customers only know some variant of what they are already getting
