In humans, albinism is a recessive trait. The disorder causes a lack of pigment in the skin and hair, making an albino appear very pale with white hair and pale blue eyes. This disorder also occurs in animals; a common albino breed in a laboratory is the white rat.

The pedigrees below trace the inheritance of the allele that causes albinism. In each pedigree, a male is represented by a square and a female is represented by a circle. If the shape is shaded, that indicates that the individual displays the trait being studied. In the case below, shaded circles represent individuals who are albino (aa).

1. Given the following genotypes, describe the phenotypes (normal or albino)
