Learn Electronics with Arduino Don Wilcher, 2012-11-27 Have you ever wondered how electronic gadgets are created? Do you have an idea for a new proof of concept tech device or electronic toy but have no way of testing the feasibility of the device? Have you accumulated a junk box of electronic parts and are now wondering what to build? Learn Electronics with Arduino will answer these questions by discovering cool and innovative applications for new tech products using modification, reuse, and experimentation techniques. You'll learn electronics concepts while building cool and practical devices and gadgets based on the Arduino, an inexpensive and easy to program microcontroller board that is changing the way people think about home brew tech innovation. Learn Electronics with Arduino uses the discovery method. Instead of starting with terminology and abstract concepts, you'll start by building prototypes with solderless breadboards, basic components, and scavenged electronic parts. Have some old blinky toys and gadgets lying around? Put them to work. You'll discover that there is no mystery behind how to design and build your own circuits, practical devices, cool gadgets, and electronic toys. As you're on the road to becoming an electronics guru, you'll build practical devices like a servo motor controller and a robotic arm. You'll also learn how to make fun gadgets like a sound effects generator, a music box, and an electronic singing bird.

Getting Started with Sensors Kimmo Karvinen, Tero Karvinen, 2014-08-14 To build electronic projects that can sense the physical world you need to build circuits based around sensors electronic components that react to physical phenomena by sending an electrical signal Even with only basic electronic components you can build useful and educational sensor projects But if you incorporate Arduino or Raspberry Pi into your project you can build much more sophisticated projects that can react in interesting ways and even connect to the Internet This book starts by teaching you the basic electronic circuits to read and react to a sensor It then goes on to show how to use Arduino to develop sensor systems and wraps up by teaching you how to build sensor projects with the Linux powered Raspberry Pi
