## **London South Bank Numeracy:**

*Teaching Adult Numeracy: Principles & Practice* Griffiths, Graham, Stone, Rachel, 2013-09-01 This book offers friendly guidance on how to work with adult learners to develop their numeracy and mathematics skills. It brings together current research and practice on teaching adult numeracy into one handy volume and covers the major issues faced by teachers of adult numeracy such as current policy perspectives and implications for teaching practice. There are reflective tasks throughout which encourage you to develop and apply your theoretical knowledge to your own experiences. Key features include: Reviews of existing policy and research and implications for practice; Reflective tasks with commentary encouraging you to develop and apply your knowledge; Case studies of real student experiences; Practical activities and ideas to support the planning, teaching and assessment of adult numeracy; Drawing on the substantial experience of the contributors who have a wealth of experience as practitioners and researchers in the field, this book is an essential resource for trainee and practising teachers of adult numeracy and mathematics. It is also an ideal textbook to support teacher training courses leading to a subject specific qualification in teaching numeracy to adults. Contributors: Jackie Ashton, John Barton, Carolyn Brooks, Martyn Edwards, Janette Gibney, David Holloway, David Kaye, Beth Kelly, Barbara Newmarch, Helen Oughton, David Prinn, Diana Spurr, Rebecca Woolley. This is a quite unique book about teaching adult numeracy which will be invaluable to the many practitioners in this field. The chapters contributed by a group of experienced and successful lecturers and practitioners include all aspects of this field from methods of teaching specific mathematical topics to more general explorations of dyscalculia and emotional factors in adult learners. Each chapter includes research findings and thoughtful presentation of ideas with practical ideas for teaching and tasks for the reader. This is a market which has not been served well in the past so it is good to see the gap filled at last. Margaret Brown, Emeritus Professor of Mathematics Education, King's College London, UK. The editors of this book set out to produce a text that would support teacher education programmes for adult numeracy and their book does that and more. The content covers different types of learners, different settings, different understandings of what numeracy actually is and ranges from commentary on research through case studies to how to hints and tips for teaching. Chapters 7 on provoking mathematical thinking and 8 attitudes, beliefs and teaching should be a required read for any adult numeracy teacher. The book would be at home on any numeracy teacher's desk and would make an excellent set text for numeracy teacher training courses. Carol Randall, course coordinator for numeracy in the department of Lifelong Learning Teacher Education, University of Greenwich, UK. This book is a welcome addition to the growing literature on adult numeracy. It should be essential reading for trainee and practising adult numeracy educators. It brings together relevant research and professional wisdom on a wide variety of aspects of adult numeracy teaching and learning in an accessible way with well focussed tasks for readers to extend their knowledge and understanding. While the book is born out of UK concerns and issues, it is also relevant to international readers. Highly recommended. Professor Diana

**The Troika of Adult Learners, Lifelong Learning, and Mathematics** Katherine Safford-Ramus, Pradeep Kumar Misra, Terry Maguire, 2016-05-02 This book presents a synopsis of six emerging themes in adult mathematics numeracy and a critical discussion of recent developments in terms of policies provisions and the emerging challenges paradoxes and tensions It also offers an extensive review of the literature adult mathematics education Why do adults want to learn mathematics Did they enjoy mathematics at school so much that they want to continue NO Most of these adults have to learn mathematics because it is part of a formal qualification they need because their job demands the ability to apply mathematics or because they need basic numeracy in their daily lives Lastly the authors discuss five potential strategies to promote lifelong learning of mathematics among adult learners

*Beyond Economic Interests* Keiko Yasukawa, Stephen Black, 2016-02-10 Over the last two decades an increasingly economic discourse has dominated discussions about adult literacy and numeracy This book provides critiques of and alternative narratives to the dominant discourse Authors provide tools and methodologies of critique including ways of seeing how policies in the countries of focus come to be captured almost completely by the interests of business and industry as well as how to critically interpret the data that policy makers use to justify their

priorities But adult literacy and numeracy practitioners and learners find spaces and places to pursue learning that matters for the lived experiences of adults and their communities Beyond Economic Interests presents the struggles and achievements of practitioners and learners that lead the readers of the book to critically appreciate that a counter narrative to the purely economic discourse of adult literacy and numeracy is much needed and possible
