

The Expanding Universe and Hubble's Law

The Recession of Galaxies and Quasars

When light from whole galaxies is analysed, in the vast majority of cases, the absorption (or emission) spectra from distant galaxies is found to be red-shifted. This indicates that all of these galaxies are moving away from us and so is evidence of an expanding Universe. The red-shift is given by: $z = -\frac{v}{c}$
Where v is the galaxy's **recession velocity** relative to our own Galaxy, the Milky Way. Note that z is positive for a red-shift, since recession velocity is taken to be negative.

Hubble's Law

The spectra of all galaxies, apart from a few very near to our own Milky Way, show red-shift. A plot of the recession velocity against distance for galaxies is close to a straight line and is called a **Hubble diagram**. The data shows that the rate at which a galaxy recedes is directly proportional to its distance from us, that is, $v = Hd$.

v is the recession velocity in kms^{-1} and d is the distance of the galaxy in Mpc. This is called **Hubble's law** and the constant of proportionality H is the **Hubble constant**, which is the gradient of a Hubble diagram. Current best estimates give $H = 67.3 \text{ kms}^{-1} \text{ Mpc}^{-1}$. Note that the SI unit for H is s^{-1} . To get H in SI units, v has to be in ms^{-1} and d in m ($1 \text{ Mpc} = 3.09 \times 10^{22} \text{ m}$).

Hubble's Law and the Big Bang

Hubble's law states that the Universe is expanding. An expanding Universe means that it is cooling down – so the further back in time, the smaller and hotter the Universe was. This implied to theoretical physicists that at a time $t=0$ the Universe came into being from an infinitely hot, infinitely dense point (called a singularity) and has been expanding ever since. This is the **Big Bang theory**, sometimes now called the Hot Big Bang (HBB) model.

An accurate value of the Hubble constant, allows an estimate of the age of the Universe. If in time t a galaxy has moved outwards a distance d at velocity v , then:

$t = \frac{d}{v}$ but from Hubble's law we have $v = Hd$ so, if we assume H has been constant, then

$$t = \frac{d}{Hd} = \frac{1}{H}$$

Therefore, the age of the Universe is the reciprocal of the Hubble constant. This gives an estimate of the age of the Universe of about 14 billion years.

Expansion of the Universe

The expansion of the Universe is a key feature of the Big Bang theory. It is the process by which the Universe is growing in size. This is not to be confused with the expansion of individual galaxies, which is a different process. The expansion of the Universe is a result of the initial conditions of the Big Bang. It is a process that has been going on ever since the Universe was created. The expansion of the Universe is a key feature of the Big Bang theory. Reids absorbing storytelling and compelling characters transport readers to a bygone era, immersing them in a world of glamour, ambition, and self-discovery. Lecture Tutorials For Hubbles Law Answer Key : Delia Owens "Where the Crawdads Sing" This mesmerizing coming-of-age story follows Kya Clark, a young woman who grows up alone in the marshes of North Carolina. Owens spins a tale of resilience, survival, and the transformative power of nature, entrancing readers with its evocative prose and mesmerizing setting. These bestselling novels represent just a fraction of the literary treasures that have emerged in 2023. Whether you seek tales of romance, adventure, or personal growth, the world of literature offers an abundance of engaging stories waiting to be discovered. The novel begins with Richard Papen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a brilliant and suspenseful novel that will keep you wondering until the very end. The novel is a cautionary tale about the dangers of obsession and the power of evil.
