Lectures on the Coupling Method Torgny Lindvall, 2012-08-15 Practical and easy to use reference progresses from simple to advanced topics covering among other topics renewal theory Markov chains Poisson approximation ergodicity and Strassen's theorem 1992 edition **Counting, Sampling and Integrating: Algorithms and Complexity** Mark

Jerrum, 2012-12-06 The subject of these notes is counting and related topics viewed from a computational perspective A major theme of the book is the idea of accumulating information about a set of combinatorial structures by performing a random walk on those structures These notes will be of value not only to teachers of postgraduate courses on these topics but also to established researchers For the first time this body of knowledge has been brought together in a single volume

Stationary and Related Stochastic Processes Harald Cramér, M. Ross Leadbetter, 2013-01-15 This graduate level text offers a comprehensive account of the general theory of stationary processes and develops the foundations of the general theory of stochastic processes examines processes with a continuous time parameter more 1967 edition *Dependence in Probability and Statistics* Patrice Bertail, Paul Doukhan, Philippe Soulier, 2006-09-24 This book gives an account of recent developments in the field of probability and statistics for dependent data It covers a wide range of topics from Markov chain theory and weak dependence with an emphasis on some recent developments on dynamical systems to strong dependence in times series and random fields There is a section on statistical estimation problems and specific applications The book is written as a succession of papers by field specialists alternating general surveys mostly at a level accessible to graduate students in probability and statistics and more general research papers mainly suitable to researchers in the field

Contemporary Trends in Discrete Mathematics Ronald L. Graham, DIMATIA (Group), DIMACS (Group), 1999 Twenty five papers from the May 1997 conference discuss current trends in discrete mathematics in all its versatility width and depth The largest number of papers deal with graph theory Other topics include a more structural algebraic approach combinatorial questions of an algebraic nature problems related to computer science and applications Annotation copyrighted by Book News Inc Portland OR *Advances in Mathematics and Applications* Carlile Lavor, Francisco A. M. Gomes, 2018-09-07 This book celebrates the 50th anniversary of the Institute of Mathematics Statistics and Scientific Computing IMECC of the University of Campinas Brazil by offering reviews of selected research developed at one of the most prestigious mathematics institutes in Latin America Written by senior professors at the IMECC it covers topics in pure and applied mathematics and statistics ranging from differential geometry dynamical systems Lie groups and partial differential equations to computational optimization mathematical physics stochastic process time series and more A report on the challenges and opportunities of research in applied mathematics a highly active field of research in the country and highlights of the Institute since its foundation in 1968 completes this historical volume which is unveiled in the same year that the International Mathematical Union IMU names Brazil as a member of the Group V of countries with the most relevant

contributions in mathematics *Permutations with Interval Restrictions* Olena Bormashenko, 2011 This thesis studies the problem of the random transposition walk on permutations with interval restrictions The mixing time of this Markov chain is explored and a number of different cases are considered For the case of bounded interval restrictions a polynomial bound for the mixing time is achieved For a specific example of bounded interval restrictions called Fibonacci permutations the correct order of the mixing time is derived An example of a family of interval restriction matrices for which the random walk mixes in exponential time is provided showing that the walk in general does not mix in polynomial time The case of one sided interval restrictions is also studied and cut off is shown for a large class of one sided interval restriction matrices Furthermore examples are provided in which chi squared cut off occurs while total variation mixing occurs significantly earlier without cut off Finally a coupling argument showing the correct order mixing time for the random transposition walk on the whole symmetric group is presented This is achieved via projection to conjugacy classes and then a path coupling argument
