| <b>Image sensor</b>                        | Low-noise CCD sensor specially tailored to the requirements of the M lens system. Pixels : 10.3 million. Dimensions : 18 mm x 27 mm. Extension factor : 1.33 x. Aspect ratio 3:2. <b>Moiré-Filter</b> no, full utilization of lens performance. Moiré detection and elimination in digital signal processing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| <b>Viewfinder</b>                          | <b>Viewfinder principle</b> Large light bright line frame viewfinder/rangefinder with automatic parallax compensation. <b>Viewfinder lens</b> optimal visibility of all bright line frames whatever the lighting situation. <b>Eye-piece</b> Coordinated to -0.5 dpt. Correction lenses available from -3 to +3 dpt. <b>Image field limiter</b> By activating two bright lines each : for 24 and 35 mm/28 and 90 mm/50 and 75 mm. Automatic Automatic activation when lens is screwed in. With the <b>image field selector</b> each pair of the bright lines can be activated manually, so simulating each focal length. <b>Parallax compensation</b> The horizontal and vertical difference between the viewfinder and the lens is automatically compensated according to the focusing distance used, i.e. the viewfinder bright-line frame automatically aligns with the subject detail recorded by the lens. <b>Magnification</b> 0.68 x (with all lenses). <b>Large-basis range finder</b> Combination of split and superimposed image range finder shown as a bright field in the centre of the viewfinder image. Effective measurement base : 21 mm (mechanical measurement). Basis : 6°/25 mm x viewfinder enlargement 0.68 x). |
| <b>Lenses</b>                              | <b>Lens on M camera</b> a 1.25 inch 16:1 ratio of optical to electronic image identification of all 6 bit-coded lenses. <b>Lens system</b> Coordinated 6 bit-coded lenses device with a focal length of 10 to 90 mm. Almost all Leica M lenses with a focal length of 21-90 mm manufactured from 1954 can also be used without 6 bit-coding. 6 bit-retrofitting possible for virtually all lenses. <b>6 bit-functions</b> Lens-dependent reduction of system-specific vignetting. Identification of picture file with lens information to simplify digital archiving. Coordination of flash reflector with motor zoom flash units. Auto slow sync function with automatic mode.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
