Simulation of Semiconductor Devices and Processes Siegfried Selberherr, Hannes Stippel, Ernst Strasser, 2012-12-06 The Fifth International Conference on Simulation of Semiconductor Devices and Processes SISDEP 93 continues a series of conferences which was initiated in 1984 by K Board and D R J Owen at the University College of Wales Swansea where it took place a second time in 1986. Its organization was succeeded by G Baccarani and M Rudan at the University of Bologna in 1988 and W Fichtner and D Aemmer at the Federal Institute of Technology in Zurich in 1991. This year the conference is held at the Technical University of Vienna Austria September 7-9 1993. This conference shall provide an international forum for the presentation of outstanding research and development results in the area of numerical process and device simulation. The miniaturization of today's semiconductor devices, the usage of new materials and advanced process steps in the development of new semiconductor technologies suggests the design of new computer programs. This trend towards more complex structures and increasingly sophisticated processes demands advanced simulators such as fully three dimensional tools for almost arbitrarily complicated geometries. With the increasing need for better models and improved understanding of physical effects the Conference on Simulation of Semiconductor Devices and Processes brings together the simulation community and the process and device engineers who need reliable numerical simulation tools for characterization, prediction and development.

Laboratory Manual for Microelectronic Circuits Kenneth C. Smith, Adel S. Sedra, 1991 This manual contains approximately 35 experiments. It follows the organization of the text and includes experiments for all major topics. To help instructors choose and prepare for the experiments, this manual identifies the core experiments all students should perform and includes manufacturers data sheets for the most common components.

Computer Simulated Experiments for Electric Circuits Using Electronics Workbench Richard H. Berube, 1997 This laboratory manual aims to help students learn and understand circuit analysis concepts by using Electronics Workbench software to simulate actual laboratory experiments on a computer. Students work with circuits drawn on the computer screen and with simulated instruments which act like actual laboratory instruments. Circuits can be modified easily with on screen editing and analysis results provide fast accurate feedback. The manual offers a hands on in approach in both interactive experiments and a series of questions about the results of each experiment. This method provides a more cost effective, safe and efficient learning process than using hardwired experiments. The manual can be sold for use with any DC AC text. An accompanying disk contains all of the circuits needed to perform the experiments on
