

## THE CORRECT WAY TO CHANGE A WHEEL

1. Position the car on as level a surface possible. Shut off engine, set parking brake and place manual transmission shift lever in reverse gear, or automatic transmission shift lever in "Park" position.

2. Remove the spare wheel, jack bar, base, hook and wrench from luggage

compartment. Block wheel diagonally opposite the one to be removed.

3. Assemble jack and position the hook in slot on bottom of bumper.

4. Insert wrench in jack, set finger control to "Up" position and "pump" until hook is seated firmly in place. Do not raise tire off of road surface.

5. Pry off wheel cover by inserting and twisting flat end of wrench 180° from valve stem. Loosen, but do not remove, wheel nuts by turning wrench toward rear of car.

6. Operate jack until tire is off the road surface. Remove wheel nuts and pull wheel off hub.

7. Install spare and lightly tighten nuts alternating from upper left to lower right and upper right to lower left. Set control finger for "Down" position and lower

car. Then finish tightening. Put wheel covers in place and hit sharply with a rubber mallet or the heel of your hand in an area 180° from valve stem. Remove block from wheel.

8. Fasten the replaced tire and jack securely in the trunk using the jack base and tie-down nut. A loose tire or jack in the trunk if thrown forward in a collision could endanger the passengers.

### CAUTION

A bumper jack is a tire-changing tool only! If it is necessary to work under the car, place supports under car structure.

We recommend that only Chrysler engineered and service approved jacks, bases, and hooks be used to jack up this vehicle.
