INDIAN TOURISM: ISSUES, CHALLENGES AND IMPACTS, VOLUME 1 Prof. H.L.Chavda, Dr. Stenly. A. Bhanat,

Recent Advancement in White Biotechnology Through Fungi Ajar Nath Yadav, Shashank Mishra, Sangram

Singh, Arti Gupta, 2019-03-08 White biotechnology or industrial biotechnology as it is also known refers to the use of living cells and or their enzymes to create industrial products that are more easily degradable require less energy create less waste during production and sometimes perform better than products created using traditional chemical processes Over the last decade considerable progress has been made in white biotechnology research and further major scientific and technological breakthroughs are expected in the future Fungi are ubiquitous in nature and have been sorted out from different habitats including extreme environments high temperature low temperature salinity and pH and may be associated with plants epiphytic endophytic and rhizospheric The fungal strains are beneficial as well as harmful for human beings The beneficial fungal strains may play important roles in the agricultural industrial and medical sectors The fungal strains and their products enzymes bioactive compounds and secondary metabolites are very useful for industry e g the discovery of penicillin from *Penicillium chrysogenum* This discovery was a milestone in the development of white biotechnology as the industrial production of penicillin and antibiotics using fungi moved industrial biotechnology into the modern era transforming it into a global industrial technology Since then white biotechnology has steadily developed and now plays a key role in several industrial sectors providing both high value nutraceutical and pharmaceutical products The fungal strains and bioactive compounds also play an important role in environmental cleaning This volume covers the latest developments and research in white biotechnology with a focus on diversity and enzymes

Marine Biotechnology Anjana K. Vala, Dushyant R.

Dudhagara, 2025-08-12 The marine environment has always been beneficial to mankind in one way or another With advancements in scientific knowledge and technological development novel aspects of marine resources have been and are being revealed that can be harnessed for sustainable development of blue economy The book *Marine Biotechnology A Gateway to Blue Economy* is an attempt to present before the scientific community a compilation of recent developments in the field of marine biotechnology contributed by leading scientists of international repute The book covers diverse roles of marine biotechnology including in agriculture probiotics health sector novel biomolecules biochemicals biomedicine and pharmaceuticals

Myconanotechnology: Green Chemistry for Sustainable Development Savita, 2022-07-21

Myconanotechnology is the interface between mycology and nanotechnology In other words myconanotechnology represents the green synthesis of nanoparticles using fungi The field is recently gaining attention due to the simple resource efficient and ecofriendly nature of fungal biotechnology Therefore Myconanotechnology is at the core of cost effective and sustainable solutions for many industrial processes This volume provides readers at all academic levels with a broad background on some of the fastest developing areas in myconanotechnology It is organised into two sections A and B

Section A updates readers on several cutting edge aspects of the synthesis and characterization of nanoparticles through the use of fungi. Section B describes applications of myco-nanotechnology including the management of bacterial and fungal diseases, pest control, and other applications in medicine and agriculture. The breadth of topics covered in the contents make this volume an informative resource on the field. Contributions are written by experts in industrial biotechnology and include extensive references to published studies. This book is a timely reference for researchers, teachers, and students and all readers who are interested in new developments in industrial mycology and nanotechnology.

Environmental Biotechnology Vol. 2 K. M. Gothandam, Shivendu Ranjan, Nandita Dasgupta, Eric Lichtfouse, 2020-05-01 This book provides the technological insight on biorefinery and nanoremediation and provides comprehensive reviews on applications of Biochar for environmental sustainability. Critical review on biosurfactants in food applications as well as sustainable agricultural practices has also been provided in this book. It also highlights the microbial omics and microRNAs for protecting ecotoxicity. Overall, this book provides critical as well as comprehensive chapters on wastewater treatment using different technologies.

Current Trends in Marine Biology Anjana K. Vala, K. Suresh Kumar, 2022-08-26 The oceans and the marine environment covering about 70% of the earth are critically important to humans. Marine biology provides an understanding of the various organisms that inhabit this essential ecosystem. Recently, biologists encompassing a broad interdisciplinary community of researchers and industrialists have gained enormous interest in understanding the enigmas of survival, the food web, primary production, natural products, interactions, and competition, communication, reproduction, evolution, diversity, fouling, and many other aspects pertaining to the marine ecosystem. This book encompasses original and internationally significant contributions from all fields of marine biology that promote understanding of the current marine environment and its life forms. It offers insights from a range of scientific sub-disciplines and will prove beneficial for students, researchers, scientists, and industrialists. It addresses topics such as bioremediation, authentication, biodiversity, as well as commercial utility.

Approaches in Bioremediation Ram Prasad, Elisabet Aranda, 2018-12-08 Bioremediation refers to the clean up of pollution in soil, groundwater, surface water, and air using typically microbiological processes. It uses naturally occurring bacteria and fungi or plants to degrade, transform, or detoxify hazardous substances to human health or the environment. For bioremediation to be effective, microorganisms must enzymatically attack the pollutants and convert them to harmless products. As bioremediation can be effective only where environmental conditions permit microbial growth and action, its application often involves the management of ecological factors to allow microbial growth and degradation to continue at a faster rate. Like other technologies, bioremediation has its limitations. Some contaminants such as chlorinated organic or high aromatic hydrocarbons are resistant to microbial attack. They are degraded either gradually or not at all; hence, it is not easy to envisage the rates of clean up for bioremediation implementation. Bioremediation represents a field of great expansion due to the important development of new technologies. Among them, several decades on metagenomics expansion has led to the

detection of autochthonous microbiota that plays a key role during transformation Transcriptomic guides us to know the expression of key genes and proteomics allow the characterization of proteins that conduct specific reactions In this book we show specific technologies applied in bioremediation of main interest for research in the field with special attention on fungi which have been poorly studied microorganisms Finally new approaches in the field such as CRISPR CAS9 are also discussed Lastly it introduces management strategies such as bioremediation application for managing affected environment and bioremediation approaches Examples of successful bioremediation applications are illustrated in radionuclide entrapment and retardation soil stabilization and remediation of polycyclic aromatic hydrocarbons phenols plastics or fluorinated compounds Other emerging bioremediation methods include electro bioremediation microbe availed phytoremediation genetic recombinant technologies in enhancing plants in accumulation of inorganic metals and metalloids as well as degradation of organic pollutants protein metabolic engineering to increase bioremediation efficiency including nanotechnology applications are also discussed
