Battery Technology Handbook H.A. Kiehne, 2003-08-29 This practical reference remains the most comprehensive guide to the fundamental theories techniques and strategies used for battery operation and design It includes new and revised chapters focusing on the safety performance quality and enhancement of various batteries and battery systems From automotive electrochemical and high energy applications to system implementation selection and standardization the Second Edition presents expert discussions on electrochemical energy storage the advantages of battery powered traction the disposal and recycling of used batteries hazard prevention and the chemistry and physics of lithium primary batteries

New Promising Electrochemical Systems for Rechargeable Batteries V. Barsukov, F. Beck, 2013-11-09 The storage of electroenergy is an essential feature of modern energy technologies Unfortunately no economical and technically feasible method for the solution of this severe problem is presently available But electrochemistry is a favourite candidate from an engineering point of view It promises the highest energy densities of all possible alternatives If this is true there will be a proportionality between the amount of electricity to be stored and the possible voltage together with the mass of materials which make this storage possible Insofar it is a matter of material science to develop adequate systems Electricity is by far the most important secondary energy source The present production rate mainly in the thermal electric power stations is in the order of 1.3 TW Rechargeable batteries RB are of widespread use in practice for electroenergy storage and supply The total capacity of primary and rechargeable batteries being exploited is the same as that of the world electric power stations However the important goal in the light of modern energy technology namely the economical storage of large amounts of electricity for electric vehicles electric route transport load levelling solar energy utilization civil video audio devices earth and spatial communications etc will not be met by the presently available systems Unless some of the new emerging electrochemical systems are established up to date RBs based on aqueous acidic or alkali accumulators are mainly produced today
