Proceedings of the 5th International Conference on Sustainable Civil Engineering Structures and Construction Materials Sheila Belayutham, Che Khairil Izam Che Ibrahim, Anizahyati Alisibramulisi, Hazrina Mansor, Muntasir Billah, 2022-04-06 This book compiles papers presented during the 5th International Conference on Sustainable Civil Engineering Structures and Construction Materials, SCESCM, held virtually in December 2020. This is the fifth edition of this conference series; the theme for the 5th SCESCM is Transforming the World Foster the Sustainable Development Goals (SDGs) and it focuses on various issues, novel findings as well as developments in the area of civil and infrastructure conforming to the SDGs. This book caters to postgraduate students, researchers and practitioners involved in advocating and embedding sustainability in various phases of design, construction and maintenance of civil engineering structures and infrastructure facilities. *Proceedings of the Indian Structural Steel Conference 2020 (Vol. 2)* Mahendrakumar Madhavan, James S. Davidson, N. Elumalai Shanmugam, 2023-08-22 This book comprises the select peer-reviewed proceedings of the Indian Structural Steel Conference, ISSC 2020. The topics cover state of the art and state of the practice in structural engineering and latest research in structural modeling and design. Novel analytical, computational and experimental techniques, proposal of new structural systems, innovative methods for maintenance, rehabilitation and monitoring of existing structures and investigation of the properties of engineering materials as related to structural behavior are presented in the book. This book will be very useful for structural engineers, researchers and consultants interested in sustainable materials and steel construction. **Advanced**

Composites Viktor Gribniak, 2021-06-02 Engineering practice has revealed that innovative technologies, structural applications require new design concepts related to developing materials with mechanical properties tailored for construction purposes. This would allow the efficient use of engineering materials. The efficiency can be understood in a simplified and heuristic manner as the optimization of performance and the proper combination of structural components leading to the consumption of the least amount of natural resources. The solution to the eco-optimization problem based on the adequate characterization of the materials will enable implementing environmentally friendly engineering principles when the efficient use of advanced materials guarantees the required structural safety. Identifying fundamental relationships

between the structure of advanced composites and their physical properties is the focus of this book. The collected articles explore the development of sustainable composites with valorized manufacturability corresponding to Industrial Revolution 4.0 ideology. The publications amongst others reveal that the application of nano particles improves the mechanical performance of composite materials. Heat resistant aluminium composites ensure the safety of overhead power transmission lines. Chemical additives can detect the impact of temperature on concrete structures. This book demonstrates that construction materials choice has considerable room for improvement from a scientific viewpoint following heuristic approaches.

Numerical and Analytical Modeling of Concrete Confined with Frp Wraps Omkar Tipnis, 2015 This thesis is intended at studying and comparing empirical models that have been proposed for the modeling of the stress strain response of a FRP confined concrete subjected to axial load An attempt has been made to model the experimental set up for the compression test of a concrete cylinder confined with FRP sheet in AbaqusCAE The results so obtained have been compared and analyzed against the experimental test results the results obtained from a chosen mathematical model Modified Lam Teng An attempt was made to create a new material model in Opensees that follows the chosen mathematical model However this was not achieved due to the reasons that will be explained in the later sections Reinforced concrete confined with steel is typically designed by considering the Manders model Mander et al 1988 which assumes a constant confining pressure This is true with the case of steel as it is a ductile material and one assumes the steel to be yielded However with the case of FRP jackets this is not true FRP is a linear elastic and brittle material and does not yield which makes the Manders model inaccurate for its analysis Many models have been proposed which take into account the increasing confining pressure due to the FRP wrap A comparative study of the constitutive models proposed for FRP confined reinforced concrete has been done in this study Finally after a series of numerical interpretations of different specimens and their comparison with the experimental data the utility and accuracy of the new modified Lam Teng s model was validated The validation process included comparison and analytical data obtained via finite element simulation in Abaqus empirical model results and the experimental data The objective is achieved and restricted within the following scope of study 1 Literature review to identify and choose the most relevant models for modeling of concrete confined with fiber reinforced polymers in compression 2 Modelling and finite element analysis of the confined concrete compression test in AbaqusCAE 3 Developing the stress strain curve from several proposed empirical model Modified Lam Teng 4 Survey of experimental data on confined concrete with FRP in order to generate an experimental database 5 Comparison of the analytical results in order to define the strengths and limitations of the empirical model chosen to study 6 Validation of the model chosen and a study on its relevance for use in typical bridge columns retrofitted with FRP jackets 7 Proposing changes to the empirical model for more accurate results 8 Validate the effects of the proposed changes
