Neumann, Thomas Fahringer, 2008-08-21 The Grid computing concept which allows users to integrate administratively and graphically dispersed computing resources has been gaining traction in a number of application areas during the past few years By interconnecting many heterogeneous though usually virtualized computing resources virtual computer centers or supercomputers can be created providing a seamless supply of computing resources Grid computing provides benefits not only for scientific computing e.g. SETI@home which interconnects one million computers across 226 countries with a total processing power of 711 TFLOPS but also in a commercial environment It is projected that computing Grids can lower the total IT costs of businesses by 30% The report Grid Computing A Vertical Market Perspective 2005-2010 by The Insight Research Corporation estimates an increase of worldwide Grid spending from 714.9 million in 2005 to approximately 19.2 billion in 2010 One of the most prominent activities in academia is the EGEE project being funded with 30 MEuro by the European Commission EGEE brings together researchers from over 27 countries with the common aim of developing a service Grid infrastructure which is suited for scientific computing with very high demand for processing power

**Information-based methods for neuroimaging: analyzing structure, function and dynamics** Jesus M.

Cortés,Daniele Marinazzo,Miguel Angel Muñoz,2015-05-07 The aim of this Research Topic is to discuss the state of the art on the use of Information based methods in the analysis of neuroimaging data Information based methods typically built as extensions of the Shannon Entropy are at the basis of model free approaches which being based on probability distributions rather than on specific expectations can account for all possible non linearities present in the data in a model independent fashion Mutual Information like methods can also be applied on interacting dynamical variables described by time series thus addressing the uncertainty reduction or information in one variable by conditioning on another set of variables In the last years different Information based methods have been shown to be flexible and powerful tools to analyze neuroimaging data with a wide range of different methodologies including formulations based on bivariate vs multivariate representations frequency vs time domains etc Apart from methodological issues the information bit as a common unit represents a convenient way to open the road for comparison and integration between different measurements of neuroimaging data in three complementary contexts Structural Connectivity Dynamical Functional and Effective Connectivity and Modelling of brain activity Applications are ubiquitous starting from resting state in healthy subjects to modulations of consciousness and other aspects of pathophysiology Mutual Information based methods have provided new insights about common principles in brain organization showing the existence of an active default network when the brain is at rest It is not clear however how this default network is generated the different modules are intra interacting or disappearing in the presence of stimulation Some of these open questions at the functional level might find their mechanisms on their structural correlates A key question is the link between structure and function and the use of structural priors for the understanding of the functional connectivity measures As effective connectivity is concerned recently a common framework has been proposed for Transfer Entropy and Granger Causality a well established methodology originally based on autoregressive models This framework can open the way to new theories and applications This Research Topic brings together contributions from researchers from

different backgrounds which are either developing new approaches or applying existing methodologies to new data and we hope it will set the basis for discussing the development and validation of new Information based methodologies for the understanding of brain structure function and dynamics
