

CHAPTER NUMBER 04

FORCE AND MOTION

1. Define force. Also give four main functions of a force.

Force

Force is an agent which is used to produce acceleration in the body.

Or

The product of mass and acceleration is called force.

$$\text{Force} = \text{mass} \times \text{acceleration}$$

$$F = ma$$

The S.I unit of force is kgm/sec^2 or Newton.

Force helps us:

- To stop a moving body
- To move a stationary body
- To change the shape of a body
- To change the direction of a body

2. State and explain Newton's first law of motion.

Newton's first law of motion

Sir Isaac Newton studied the relative motion of bodies in the universe and put forwarded some laws which are known as Newton's laws of Motion.

Statement

Everybody in the universe keeps continue its state of rest or of uniform motion until an unbalanced force acts upon it.

Explanation

If a body is in the state of rest it will be at rest, if a body is in motion it will remain in motion until an external force is applied on the body. The force which is applied to change the state of body must overcome the inertia of the body.

Mechanical Engineering Principles offers a student friendly introduction to core engineering topics This book introduces mechanical principles and technology through examples and applications rather than theory John Bird and Carl Ross do not assume any previous background in engineering studies and as such this book can act as a core textbook for several engineering courses This approach enables students to develop a sound understanding of engineering principles and their use in practice These theoretical concepts are supported by 320 fully worked problems nearly 600 further problems with answers and 276 multiple choice questions giving the reader a firm grounding on each topic The new edition is up to date with the latest BTEC National specifications and can also be used on undergraduate courses in mechanical civil structural aeronautical and marine engineering together with naval architecture A chapter has been added at the beginning on revisionary mathematics since progress in engineering studies is not possible without some basic mathematics knowledge Minor modifications and some further worked problems have also been added throughout the text Colour layout helps navigation and highlights key points Student friendly approach with numerous worked problems multiple choice and short answer questions exercises revision tests and nearly 400 diagrams Supported with free online material for students and lecturers Readers will also be able to access the free companion website at www.routledge.com/bird where they will find videos of practical demonstrations by Carl Ross Full worked solutions of all 600 of the further problems will be available for lecturers instructors use as will the full solutions and marking scheme for the 8 revision tests
