Mothers And Others The Evolutionary Origins Of Mutual Understanding:

Mothers and Others Sarah Blaffer Hrdy, 2011-04-15 Sarah Hrdy argues that if human babies were to survive in a world of scarce resources they would need to be cared for not only by their mothers but also by siblings aunts fathers friends and with any luck grandmothers Out of this complicated and contingent form of childrearing says Hrdy came the human capacity for understanding others

How Babies Sleep Helen L. Ball, 2025-05-27 From a pioneering infant sleep researcher this book is a salvation for parents of newborns trying to maintain a nighttime routine Over the past century and a half we have tried to manipulate baby sleep to fit with the rapidly changing nature of adult lives The mismatch we have created with our babies biology is framed as baby sleep problems and infants are often treated using behavioural and clinical interventions But it is not baby sleep that needs fixing only our understanding of it In *How Babies Sleep* Helen Ball brings together cutting edge science anthropological insight and practical advice to provide parents with everything they need to help them confidently and sanely navigate the first 365 night times with a new baby It will teach you how to harmonise your needs with those of your infant and empower you to reject approaches that make you uncomfortable Feel confident in a strategy that works for you and your family

The Creative Spark Agustín Fuentes, 2017-03-21 A bold new synthesis of paleontology archaeology genetics and anthropology that overturns misconceptions about race war and peace and human nature itself answering an age old question What made humans so exceptional among all the species on Earth Creativity It is the secret of what makes humans special hiding in plain sight Agustín Fuentes argues that your child's finger painting comes essentially from the same place as creativity in hunting and gathering millions of years ago and throughout history in making war and peace in intimate relationships in shaping the planet in our communities and in all of art religion and even science It requires imagination and collaboration Every poet has her muse every engineer an architect every politician a constituency The manner of the collaborations varies widely but successful collaboration is inseparable from imagination and it brought us everything from knives and hot meals to iPhones and interstellar spacecraft Weaving fascinating stories of our ancient ancestors creativity Fuentes finds the patterns that match modern behavior in humans and animals This key quality has propelled the evolutionary development of our bodies minds and cultures both for good and for bad It's not the drive to reproduce nor competition for mates or resources or power nor our propensity for caring for one another that have separated us out from all other creatures As Fuentes concludes to make something lasting and useful today you need to understand the nature of your collaboration with others what imagination can and can't accomplish and finally just how completely our creativity is responsible for the world we live in Agustín Fuentes's resounding multimillion year perspective will inspire readers and spark all kinds of creativity

Adoption Beyond Borders Dr. Rebecca Compton, 2016-02-15 Now Available in Paperback *Adoption Beyond Borders* endorses international adoption as a viable path to child welfare by exploring key topics including Effects of institutionalization on children's developing brains cognitive abilities and socioemotional functioning Challenges of

navigating issues of identity when adopting across national cultural and racial lines Strong emotional bonds that form even without genetic relatedness How adoptive families can address the special needs of children who experienced early neglect and deprivation thereby providing a supportive environment in which to flourish Features the author's first hand accounts of her own adoption journey as she visited a Kazakhstani orphanage daily for nearly a year and illustrates the complexities and implications of the research evidence *Scientific American*, 2008
