Planning for Seafood Freezing Edward Kolbe, Donald E. Kramer, 2007 Most of the exquisite quality of fresh fish can be retained in frozen product with proper handling freezing and storage This manual helps seafood processors plan seafood freezing operations in order to maintain that quality The book addresses the physics of freezing the selection of equipment and the important food science concepts The audience is plant managers and engineers refrigeration contractors seafood process planners investors and bankers and extension educators and advisors The sections on equipment and facilities explore options and give information that will help the reader make good decisions Author Ed Kolbe contributes engineering expertise and Don Kramer offers knowledge of optimum seafood quality both based on decades of academic and extension accomplishments *Actes du ... Congrès international du froid* ,1987 **Planning a Small Meat-packing Business**

Cold and Freezer Storage Manual E. R. Hallowell, 1980 Abstract Cold and freezer storage is an important part of food processing and distribution New power sources and growing energy costs have led to engineering redesigns of storage systems which apply concepts of energy efficiency and conservation Information on design practices and equipment selection in the refrigeration industry is presented for operators of cold storage installations Section I describes principles of refrigeration and refrigerants Section II considers warehouse construction and equipment small intermediate and large cold storage facilities machinery and system selection control components and lighting electrical supply and insulation of freezers and coolers Section III discusses warehouse and freezer management and use in terms of the recent growth of the refrigerated foods industry and commodity storage requirements Derivation of Walk-in Cooler and Freezer Performance Standard Equations as They Pertain to the ANSI/AHRI Standard 1250 and 1251 Bryan Curtis Sartin, 2012 The ANSI AHRI American National Standard Institute ANSI Air Conditioning Heating and Refrigeration Institute AHRI Standard 1250 1251 Performance Rating of Walk In Coolers and Freezers strives to standardize refrigeration equipment performance rating According to the Standard refrigeration equipment is tested in a laboratory setting using a defined test method An existing algorithm is used to calculate the Annual Walk in Energy Factor AWEF which serves as a comparison of energy efficiency between equipment In this work the algorithm was modified in an attempt to more closely approximate actual refrigeration system operation To calculate the AWEF a walk in box load profile and a ratio of the equipment capacity to the refrigeration

load are assumed by the Standard An extensive literature review of ninety eight articles was performed to address these assumptions Information was categorized and analyzed for each load component including lighting occupancy product infiltration conduction and miscellaneous loads Additional information was collected on refrigeration system design and operation A model load profile was developed from which a revised AWEF algorithm was obtained Simulations were performed on four walk in refrigeration units to validate the revised calculation method Raw results show improved correlation of compressor runtime because a specific compressor runtime was targeted reducing variation between hourly simulations and the 1250 calculation from 29.9% with the AHRI 1250 calculation Becker et al 2011 to 1.1% with the Proposed 1250 calculation AWEF correlation between hourly simulations and the 1250 calculation degraded from 7.4% with the AHRI 1250 calculation Becker et al 2011 to 15.9% with the Proposed 1250 calculation Plotting the results for the AWEF and compressor runtime correlation versus variation in the box load between the hourly simulation and Proposed 1250 calculation results revealed an issue with the compressor runtime calculation At a box load variation of zero the Proposed 1250 AWEF correlation is improved to 2.4% and the Proposed 1250 compressor runtime correlation is degraded to 14.6% If a specific compressor runtime had not been targeted the AWEF correlation for each simulation set would have been improved To summarize the Proposed 1250 equations yield an improved AWEF calculation but do not accurately calculate the corresponding compressor runtime
