A Text-book on the Mechanics of Materials, and of Beams, Columns, and Shafts Mansfield Merriman, 1904
The United States Catalog, 1903 *Towers and Tanks for Water-works* James Nisbit Hazlehurst, 1904 The inability to find any information on the increasingly popular water tower resulted in the author in 1901 plugging this apparent gap himself His first edition was so successful that he quickly produced this second edition which also includes a record of stand pipe failures and a chapter on stresses in steel water towers *Rational Geometry* George Bruce Halsted, 1904 *Notes for chemical students* Peter Townsend Austen, 1896 *The Gunner's Examiner* Harold Edward Cloke, 1905 **The Modern Asphalt Pavement** Clifford Richardson, 1905 **Kinematics of Machinery** John Henry Barr, 1899 A collection of critical essays on Proust's Remembrance of Things Past arranged in chronological order of publication **The Suppression of Tuberculosis** Emil von Behring, 1904 *Thermodynamics of the Steam-engine and Other Heat-engines* Cecil Hobart Peabody, 1905 This work is designed to give instruction to students in technical schools in the methods and results of the application of thermodynamics to engineering While it has been considered desirable to follow commonly accepted methods some parts differ from other text books either in substance or in manner of presentation and may require a few words of explanation The general theory or formal presentation of thermodynamics is that employed by the majority of writers and was prepared with the view of presenting clearly the difficulties inherent in the subject and of giving familiarity with the processes employed In the discussion of the properties of gases and vapors the original experimental data on which the working equations whether logical or empirical must be based are given quite fully to afford an idea of the degree of accuracy attainable in calculations made with their aid Rowland's determination of the mechanical equivalent of heat has been adopted and with it his determination of the specific heat of water at low temperatures The author's Tables of the Properties of Saturated Steam and Other Vapors were calculated to accompany this work and may be considered to be an integral part of it The chapters on the flow of gases and vapors and on the injector are believed to present some novel features especially in the comparisons with experiments The feature in which this book differs most from similar works is in the treatment of the steam engine It has been deemed advisable to avoid all approximate theories based on the assumption of adiabatic changes of steam in an engine cylinder and instead to make a systematic study of steam engine tests with the view of finding what is actually known on the subject and how future investigations and improvements may be made For this purpose a large number of tests have been collected arranged and compared Special attention is given to the investigations of the action of steam in the cylinder of an engine considerable space being given to Hirn's researches and to experiments that provide the basis for them Directions are given for testing engines and for designing simple and compound engines Chapters have been added on compressed air and refrigerating machines to provide for the study of these important subjects in connection with the theory of thermodynamics **Reflections on the Motive Power of Heat** Sadi Carnot, 1897 **The**
