Dictionary of Pharmacovigilance Amer Alghabban, 2004. Pharmacovigilance is in essence the process of monitoring the everyday use of medicines to identify previously unrecognised adverse drug reactions thereby assessing their risk/benefit balance in order to determine what action if any is necessary to improve their safe use. As a discipline pharmacovigilance impacts on many specialist areas such as pharmacoepidemiology medical practice public health but is most intimately linked to clinical research development and drug licensing. The discipline along with its operational and legal facets for both regulatory authorities and pharmaceutical industry envelops colossal terminology that has precise legal and scientific significance. Such terminology may vary from country to country or more confusingly different countries may use identical or similar abbreviations terms or phrases to mean different entities. The Dictionary of Pharmacovigilance contains a comprehensive list of abbreviations terms and phrases in English giving definitions of commonly and rarely encountered pharmacovigilance terms. Examples include Absolute Risk Increase ARI Bayesian Confidence Propagation Neural Network BCPNN Confounding Factor Case narrative Causality Assessment Company Core Safety Information CCSI Data mining 15 day report Rechallenge Directive 2001/83/EC EU Birth Date Expert report FDA Form 1639 Historical control Number

Introduction to MedDRA Labeling Grouping (MLG) Council for International Organizations of Medical Sciences (CIOMS) , 2024-03-18 The Medical Dictionary for Regulatory Activities MedDRA is a terminology developed by the International Council for Harmonisation ICH While it is useful for precise coding of adverse events of medicines for data analysis its high granularity can obscure the communication of adverse reactions in product labeling for healthcare practitioners Many sponsors and regulators have therefore begun to develop their own approaches to clustering similar adverse reaction terms in medical product prescribing information on a product by product basis However there are no agreed upon conventions that describe which adverse reaction terms may be appropriate to group together To improve safety communication to patients and healthcare providers there is an urgent need for a harmonized international approach to the creation and use of groups of MedDRA terms or MedDRA Labeling Groupings MLGs in medical product prescribing information The use of the consensus recommendations proposed in this report would be voluntary and applied to product labels in a manner that is consistent with existing regulatory frameworks <https://doi.org/10.56759/hmku5307>
