Abstract

The paper analyzes some aspects of waste management in Romania and, in particular, in Iasi County, in view of the European perspective. Urban and rural waste management is considered and collection, transport, processing, recycling or disposal of waste materials is discussed relative to the National Waste Management Strategy and the National Plan for Waste Management, as well as European and national legislative framework.

It was showed that land disposal will continue to be a disposal option but due to stricter regulation. Also, some problems with reference to waste management hierarchy and pollution prevention practices that reduce or eliminate the amount and/or toxicity of generated wastes released to the air, land or water before any management practices, treatment or disposal are explored. Local and regional authorities are heavily and increasingly involved in the management of waste. In most cases, they are responsible for developing and implementing municipal waste management plans based on the medium to long term. Solid waste management is regarded much more than a technological issue and usually involves managing a large workforce and working together closely with the public.

Keywords: landfill, management, pollution prevention, solid waste

1. Waste management in European perspective

1.1. Overview

Since the mid - 1980s it has been recognized that waste, as with other environmental problems, is a global issue. Waste is now not only a danger to the environment, but it is increasingly a threat to human health and the way of life. Article 8 of the Sixth Action Programme sets down proposals relating to the sustainable use and management of natural resources and waste.

Waste generation is increasing in the EU, and amounted to about 3.5 tonnes of solid waste per person in 1995 (excluding agricultural waste), mainly from manufacturing, construction and demolition and mining (Fig. 1) (EEA, 1998). Waste management includes all the waste collection, transport, treatment, recovery and disposal (Eriksson et al., 2005). Responsibilities for waste management activities shall be assigned to waste generators, according to the *polluter pays*

principle or, as the case may be, to waste producers, according to the *producer responsibility* principle.

Organising the collection, transport and disposal of municipal waste is one of the obligations of local public administration.

Most communities use an integrated approach to waste management, meaning they use a variety of ways to handle the trash produced by their citizens. Some of these include pollution prevention, landfilling, recycling, composting,
