Reactor Physics: Methods and Applications Tengfei Zhang,Ding She,Shripad T. Revankar,Jun Wang,Qian Zhang,2022-06-29 Assessment and Management of Environmental Risks: Cost-Efficient Methods and Applications Igor Linkov,José Palma-Oliveira,2001-10-31 The management of environmental contamination requires decision makers to weigh existing risks against the potential effects of implementing environmental policies considering both the benefits and disruptions that may result from different courses of action The present book represents an major advance in the development and application of cost efficient methods of risk assessment especially under circumstances of budget constraints and in developing countries The book explores the potential of risk assessment to act as a unified and unifying technique for addressing a wide range of environmental problems A wide range of issues are discussed ranging from specific and local studies through global decision and management frameworks The approaches developed range from specific methods through widely applied public policies The book shows that the use of risk assessment can provide the scientific basis for environmentally sound cost effective policies strategies and solutions to our environmental challenges **The Practice of Consumer Exposure Assessment** Gerhard Heinemeyer,Matti Jantunen,Pertti Hakkinen,2020-01-03 This book closes a current gap by providing the scientific basis for consumer exposure assessment in the context of regulatory risk assessment Risk is defined as the likelihood of an event occurring and the severity of its effects The margin between the dose that leads to toxic effects and the actual dose of a chemical is identified by estimating population exposure The objective of this book is to provide an introduction into the scientific principles of consumer exposure assessment and to describe the methods used to estimate doses of chemicals the statistics applied and computer tools needed This is presented through the backgrounds of the special fields in exposure analysis such as exposure via food and by the use of consumer products toys clothing and other items As a general concept human exposure is also understood to include exposure via the environment and from the work setting In this context the specific features of consumer exposure are pointed out and put into the context of regulation in particular food safety chemicals safety REACH and consumer product safety The book is structured into three parts The first part deals with the general concepts of consumer exposure as part of the overall risk analysis framework of risk characterization risk assessment and risk communication It describes the three basic features of exposure assessment i the exposure scenario ii the exposure model and iii the exposure parameters addressing external and internal exposure Also the statistical presentation of data to characterize populations in connection with variability uncertainty and quality of information and the presentation of exposure evaluation results is described The second part deals with the specific issues of exposure assessment exposure via food consumption exposure from use of consumer products household products toys cosmetic products textiles pesticides and others This part also covers methods for acquisition of data for exposure estimations including the relevant information from regulations needed to perform an accurate exposure assessment The

third part portrays a prospect for further needs in the development and improvement of consumer exposure assessment as well as international activities and descriptions of the work of institutions that are involved in exposure assessment on the regulatory and scientific level And conversely it creates the rationale for the exposure assessment details necessary to satisfy regulatory needs such as derivation of upper limits and risk management issues *AIAA Journal* American Institute of Aeronautics and Astronautics,2008 *Geographic Information Systems and Applications in Coastal Studies* Yuanzhi Zhang,Qiuming Cheng,2022-12-07 In recent years geographic information systems GIS and their coastal applications have drawn increasing awareness globally regionally and locally These systems are used to monitor model and predict coastal zone issues New technologies including advances in GIS platforms and techniques are being adopted and innovatively applied to coastal environments and disasters coastal resources coastal social systems and coastal urban environments using new algorithms big data processing and deep learning approaches This book examines a variety of GIS applications providing a comprehensive overview of techniques approaches and experiences in GIS for coastal zones **Modelling Aspects of Water Framework Directive Implementation** Peter A. Shafer theory does not require an assumption regarding the probability of the individual constituents of the set or interval. This is a potentially valuable tool for the evaluation of risk and reliability in engineering applications when it is not possible to obtain a precise measurement from experiments or when knowledge is obtained from expert elicitation. An important aspect of this theory is the combination of evidence obtained from multiple sources and the modeling of conflict between them. This report surveys a number of possible combination rules for Dempster Shafer structures and provides examples of the implementation of these rules for discrete and interval valued data.
