Modern Biology V. B. Rastogi, 1997 Teacher's Guide to the Modern Biology Program James Howard Otto, Albert Towle, Elizabeth H. Crider, 1965 **Fluorescent Energy Transfer Nucleic Acid Probes** Vladimir V. Didenko, 2008-02-04

Fluorescent nucleic acid probes which use energy transfer include such constructs as molecular beacons molecular break lights Scorpion primers TaqMan probes and others These probes signal detection of their targets by changing either the intensity or the color of their fluorescence Not surprisingly these luminous multicolored probes carry more flashy names than their counterparts in the other fields of molecular biology In recent years fluorescent probes and assays which make use of energy transfer have multiplied at a high rate and have found numerous applications However in spite of this explosive growth in the field there are no manuals summarizing different protocols and fluorescent probe designs In view of this the main objective of *Fluorescent Energy Transfer Nucleic Acid Probes Designs and Protocols* is to provide such a collection

Oligonucleotides with one or several chromophore tags can form fluorescent probes capable of energy transfer Energy transport within the probe can occur via the resonance energy transfer mechanism also called Förster transfer or by non-Förster transfer mechanisms Although the probes using Förster transfer were developed and used first the later non-Förster based probes such as molecular beacons now represent an attractive and widely used option The term fluorescent energy transfer probes in the title of this book covers both Förster based fluorescence resonance energy transfer FRET probes and probes using non FRET mechanisms Energy transfer probes serve as molecule size sensors changing their fluorescence upon detection of various DNA reactions *Modern Biology* James Howard Otto, Albert Towle, 1977 **Biophotonics** Xun Shen, Roel van Wijk, 2006-12-11

It is now well established that all living systems emit a weak but permanent photon flux in the visible and ultraviolet range This biophoton emission is correlated with many if not all biological and physiological functions There are indications of a hitherto overlooked information channel within the living system Biophotons may trigger chemical reactivity in cells growth control differentiation and intercellular communication i.e. biological rhythms The basic experimental and theoretical framework as well as the technical problems and the wide field of applications in the biotechnical biomedical engineering engineering medicine pharmacology environmental science and basic science fields are presented in this book To promote the dialog and mutual penetration between biophoton research and photon technology is one of the important goals for the International Conference on Biophotons Biophotonics 2003 and is developed and presented in *Biophotonics Optical Science and Engineering in the 21st Century* Energy Transfer Dynamics Terence William Barrett, Herbert A. Pohl, 1987-04-27

On three occasions and at different locations conferences were held to honor the eightieth birthday of Professor Herbert Frohlich on the 18th December 1985 in Liverpool England on the 14th February 1986 in Stuttgart Germany and on the 8th March 1986 on the Palm Coast Florida This Festschrift is a compilation of the papers of those conferences Frohlich's choice of problems from the earliest days was couched in the physics of intrinsically interacting

systems of excitation One example in which he set the course of research which is still followed concerned dielectric breakdown developed from the 1930 s over several decades The interacting systems are the electrons receiving energy from an electric field and lattice atom motion taking energy from the electrons via electron phonon interaction hence heat dissipation There is a threshold field above which the latter cannot keep up with the former and the combined system electrons plus phonons runs away that is to say collectively it switches to a new state
