

## JANUARY ... DOES IT BRING YOU JOY?

- 1 January is the time for renewal on many fronts. It's the time of the year to re-evaluate everything. If something or someone doesn't bring you joy, it's pretty pointless carrying on with it. If we want the best, we must do our best. We must keep our family space safe and secure so that we are thriving as a people and as a nation. 5
- 2 In order to live their best lives, people are spreading themselves thinner and thinner with multiple streams of income. In the process we earn more but live less, we lose our focus of what is important.
- 3 With social media, keeping up with other Instagrammers are having a devastating effect on self-perception. Everything appears to be real perfect, but the fabric of our society is frazzled. Use January to take stock and start navigating new ways of doing things. Instead of multiple streams of sole sessions, travel more, and connect with people and places that bring you joy. 10

Fractal Analyses: Statistical And Methodological Innovations And Best Practices John G. Holden, Michael A. Riley, Jianbo Gao, Kjerstin Torre, 2013-06-03 Many statistical and methodological developments regarding fractal analyses have appeared in the scientific literature since the publication of the seminal texts introducing Fractal Physiology. However, the lion's share of more recent work is distributed across many outlets and disciplines including aquatic sciences, biology, computer science, ecology, economics, geology, mathematics, medicine, neuroscience, physics, physiology, psychology, and others. The purpose of this special topic is to solicit submissions regarding fractal and nonlinear statistical techniques from experts that span a wide range of disciplines. The articles will aggregate extensive cross-discipline expertise into comprehensive and broadly applicable resources that will support the application of fractal methods to physiology and related disciplines. The articles will be organized with respect to a continuum defined by the characteristics of the empirical measurements a given analysis is intended to confront. At one end of the continuum are stochastic techniques directed at assessing scale invariant but stochastic data. The next step in the continuum concerns self-affine random fractals and methods directed at systems that entail scale invariant or  $1/f$  patterns or related patterns of temporal and spatial fluctuation. Analyses directed at noisy deterministic signals correspond to the final stage of the continuum that relates the statistical treatments of nonlinear stochastic and deterministic signals. Each section will contain introductory articles, advanced articles, and application articles so readers with any level of expertise with fractal methods will find the special topic accessible and useful. Example stochastic methods include probability density estimation for the inverse power law, the lognormal, and related distributions. Articles describing statistical issues and tools for discriminating different classes of distributions will be included. An example issue is distinguishing power law distributions from exponential distributions. Modeling issues and problems regarding statistical mimicking will be addressed as well. The random fractal section will present introductions to several one-dimensional monofractal time series analysis. Introductory articles will be accompanied by advanced articles that will supply comprehensive treatments of all the key fractal time series methods such as dispersion analysis, detrended fluctuation analysis, power spectral density analysis, and wavelet techniques. Box counting and related techniques will be introduced and described for spatial analyses of two and three dimensional domains as well. Tutorial articles on the execution and interpretation of multifractal analyses will be solicited. There are several standard wavelet-based and detrended fluctuation-based methods for estimating a multifractal spectrum. We hope to include articles that contrast the different methods and compare their statistical performance as well. The deterministic methods section will include articles that present methods of phase space reconstruction, recurrence analysis, and cross recurrence analysis. Recurrence methods are widely applicable but motivated by signals that contain deterministic patterns. Nonetheless, recent developments such as the analysis of recurrence interval scaling relations suggest applicability to fractal systems. Several related statistical procedures will be included in this

section Examples include average mutual information statistics and false nearest neighbor analyses      **Programming Languages and Systems** Jacques Garrigue,2014-10-13 This book constitutes the refereed proceedings of the 12th Asian Symposium on Programming Languages and Systems APLAS 2014 held in Singapore Singapore in November 2014 The 20 regular papers presented together with the abstracts of 3 invited talks were carefully reviewed and selected from 57 submissions The papers cover a variety of foundational and practical issues in programming languages and systems ranging from foundational to practical issues The papers focus on topics such as semantics logics foundational theory design of languages type systems and foundational calculi domain specific languages compilers interpreters abstract machines program derivation synthesis and transformation program analysis verification model checking logic constraint probabilistic and quantum programming software security concurrency and parallelism as well as tools and environments for programming and implementation      *Proceedings of the United States Naval Institute* United States Naval Institute,2013

determining the allocation of creditor control rights and establishing bank capital adequacy requirements The chapters in this book provide illustrative discussion analysis and evidence on the importance of accounting information in credit markets The first of the four pieces reflects on how a conservative financial reporting system helps firms obtain debt funds and with better conditions and why this is the case The second examines the effects of accounting disclosure on credit ratings of private companies and shows that accounting information is useful for credit rating agencies The two final pieces reflect on how banks should account for credit losses and on how regulators are tackling this issue The chapters in this book were originally published as a special issue of Accounting and Business Research *Traffic World and Traffic Bulletin* ,1928
