Capacity Building in Educational Research in Southern Africa Charles M. Nherera, Pamela Machakanja, P. W. Mamimine, 1999      Which Way Social Justice in Mathematics Education? Leone Burton, 2003-02-28 This contributed volume explores equity and social justice within the field of mathematics education In part one Helga Jungwirth's introductory chapter provides a strong theoretical overview that is based in actual classroom behaviors and a typology that classifies the various interpretations found within this volume Also in part one Laurie Hart discusses developments in equity research in the United States Part two focuses on results of studies about social justice and their impact on learning in mathematics classrooms in various parts of the world For example in a chapter on Peru social justice does not just encompass gender but also inequalities in opportunities to learn such as problems of resources living and social conditions communal demands and language needs And part three focuses on computers as a resource to mathematics teaching The contributors raise several important social justice issues which have previously remained unresearched Although there are a number of chapters specifically dealing with gender many of the authors use one of the following strategies their gender specific questions are set in a wider socio cultural context they challenge what have threatened to become false orthodoxies or they raise other important issues These other issues include the meaning of democratic citizenship for mathematics classrooms the links between parents and children learning mathematics and the preconceptions of some teachers of underprivileged students in Australia Other chapters explore different forms of classroom communication participation and assessment The pieces on computers state that there is still not enough research to conclude whether computers in the mathematics classrooms are supportive of or detrimental to the learning of all students The one thing on which every author in this volume does agree is that social justice in mathematics education has still not been attained but that we must strive toward it to improve educational practices and society in general      Role Of Women In The Development Of Science And Technology In The Third World - Proceedings Of The Conference Organized By The Canadian International Development Agency And The Third World Academy Of Sciences A M Faruqui, M H A Hassan, G Sandri, 1991-02-26 This conference was organised by the Third World Academy of Sciences in collaboration with the Canadian International Development Agency For the 250 female scientist participants from distant lands and diverse cultures from the Caribbean to the Far East the conference proved a stimulating experience to recognize their strength in terms of numbers and achievements to forge new links nationally and internationally and to demonstrate that science is independent of gender and is no longer an exclusively male dominated preserve The first part of the proceedings deals with the global Third World and national perspectives of the theme Women and Science and the second highlights the scientific contributions by Third World women scientists their personal experiences and scientific reports The publication of these proceedings would serve as a potentially effective strategy aimed at enhancing the status of women scientists not only in the Third World but worldwide      *Technical Papers of the ...
