OCR Psychology Philip Banyard, Cara Flanagan, 2013-09-05 OCR Psychology Third Edition is endorsed by OCR for use with the OCR AS Psychology specification. This book prepares students for all elements of the OCR Psychology AS exam. It covers both research methods and core studies, giving the who, what, where, and even the why of each study. It also looks at some of the work that followed the studies. Key features of the book include Psychological Investigations, the first chapter of the book, which helps students to understand research methods in psychology; useful support for the Psychological Investigations exam; and for understanding the core studies themselves. Core Studies: each study is described first in a Nutshell, followed by a detailed account of the aims, method, results, and conclusions. Guidance is given on how each study can be evaluated, and a wealth of extra materials is provided for each study: questions to assess understanding, practical activities, multiple choice and exam style questions, further reading, and video links. Background to each core study is included in the Starters and Afters, featuring information about related research before and after the study, and biographical details of the researcher. Approaches, perspectives, issues, and methods are considered in a brand new chapter to cover the themes of the course and prepare students for the long answer questions on the Core Studies exam. Exam guidance: each chapter ends with short and long answer exam style questions, answered by students with teacher feedback. The book is presented in colourful and well-structured magazine style spreads to aid the learning process. Recent Progress in Computational Sciences and Engineering (2 vols) Theodore Simos, 2019-05-07. This volume brings together selected contributed papers presented at the International Conference of Computational Methods in Science and Engineering ICCMSE 2006 held in Chania, Greece, October 2006. The conference aims to bring together computational scientists from several disciplines in order to share methods and ideas. The ICCMSE is unique in its kind. It regroups original contributions from all fields of the traditional Sciences: Mathematics, Physics, Chemistry, Biology, Medicine, and all branches of Engineering. It would be perhaps more appropriate to define the ICCMSE as a conference on computational science and its applications to science and engineering. Topics of general interest are: Computational Mathematics, Theoretical Physics, and Theoretical Chemistry; Computational Engineering and Mechanics; Computational Biology and Medicine; Computational Geosciences and Meteorology; Computational Economics and Finance; Scientific Computation; High Performance Computing; Parallel and Distributed Computing; Visualization; Problem Solving Environments; Numerical Algorithms; Modelling and Simulation of Complex Systems; Web-based Simulation and Computing; Grid-based Simulation and Computing; Fuzzy Logic; Hybrid Computational Methods; Data Mining; Information Retrieval and Virtual Reality; Reliable Computing; Image Processing; Computational Science and Education, etc. More than 800 extended abstracts have been submitted for consideration for presentation in ICCMSE 2005. From these, 500 have been selected after international peer review by at least two independent reviewers.
