Dirkjan Veeger,Riemer J. K. Vegter,Victoria Louise Goosey-Tolfrey,Christof A. Leicht,2022-12-12 [Multiphysics Methods and Analysis Applied to Nuclear Reactor Systems](#) Mark D. DeHart,Deokjung Lee ,Kirk Atkinson,Emily Shemon ,Julien Taforeau,2025-11-21 Multiphysics modeling and simulation in nuclear engineering is critical for the design analysis and operation of advanced nuclear reactors These simulations encapsulate the intricate interactions between various physical phenomena such as fluid dynamics heat transfer and nuclear reactions providing a virtual yet robust framework for reactor assessment This approach significantly reduces reliance on expensive and potentially hazardous experimental testing

Ensuring the validity of these models through experimental data and precise uncertainty quantification is paramount to align with the stringent safety and regulatory standards of the nuclear industry. High fidelity computational methods thus play a pivotal role in advancing nuclear reactor safety and performance while navigating the complexities of regulatory compliance and operational efficiency in a rapidly evolving technological landscape. This Research Topic is dedicated to presenting the forefront of research and providing deep insights into the pivotal role that sophisticated simulations play in advancing nuclear reactor technologies. The Topic will explore the frontier of innovative computational methods that facilitate the integration of diverse physical phenomena. These multiphysics models are essential tools in the design and safety analysis of nuclear reactors, helping to predict and optimize performance under a wide array of operating conditions, reduce conservatism compared to more traditional methods, and gain physical insight that is currently unavailable through experimental data. A central theme of this collection is the rigorous experimental validation that these models undergo to confirm their accuracy and reliability. Such validation efforts are vital for ensuring that the simulations can be confidently used in critical decision making processes. Additionally, this Topic will address the intricacies of uncertainty quantification within these models, a process that is becoming increasingly important as it directly impacts regulatory standards and the approval of new reactor designs. By bringing together this knowledge, this collection will illuminate the ongoing developments and challenges in the field while emphasizing the importance of precision and rigor in the modeling of advanced nuclear systems. Submissions are encouraged from a diverse international pool of contributors including industry professionals, academic researchers, and research laboratory experts to foster a multidisciplinary dialogue that addresses both present challenges and future needs in this rapidly growing field. This Research Topic welcomes a mix of Original Research articles, Reviews, Mini Reviews, Perspectives, and Data Reports. Manuscripts focused on the following areas are of particular interest to this Research Topic: Innovative Computational Methods, Explorations of new algorithms, software, or techniques that enhance multi-physics simulation, Model Integration and Coupling Studies on how models representing distinct physical processes can be effectively integrated to provide comprehensive simulations, Design Optimization, The use of multiphysics simulations to inform and optimize reactor design, Safety Analysis, Contributions that utilize modeling and simulation to analyze and improve the safety of nuclear reactors, Experimental Validation, Papers that detail the validation of models against experimental data, Uncertainty Quantification, Studies focused on methods for quantifying uncertainties within simulations, Regulatory Implications, Discussions on how advanced simulations align with, inform, or challenge current regulatory frameworks, Case Studies, Detailed case studies of how multiphysics modeling and simulation have been applied in real-world scenarios, Experiment Optimization, Discussions on how multiphysics modelling and simulation has been used to prioritize experimental gaps, enhance data collection, and reduce the number of experimental variations needed.

Research in Social Psychology, Prevention Activities and Mental Health Promotion Sergio López García,José Enrique Moral-García,Manuel Joaquim Loureiro,Alba González-Palomares,Brais Ruibal-Lista,2024-12-18 According to the latest recommendations of the World Health Organization regular physical activity is essential to combat sedentary lifestyles and other health problems Physical activity proper nutrition and proper rest are habits that must be adhered to by the entire population There are many effects of physical exercise on a cognitive and mental health level People with mood disorders tend to consume more toxic substances that in turn aggravate those problems If it can be integrated into a routine frequent exercise can be a way of organizing life in addition to obtaining physiological benefits such as less chronic inflammation or a segregation of substances that promote sleep Also for those with social anxiety physical exercise causes the release of endorphins which leads to an improvement in their mental health Physical exercise can boost your self esteem and give you a sense of accomplishment Studies have shown that an increase in self esteem is linked to better social interaction and healthier relationships *Signals in motion* Eunice Jingmei Tan,Mark A. The Software Encyclopedia ,1997 **COVID-19 Epidemiological Situation as a Psychosocial Determinant of Trauma and Stress** Mateusz Krystian Grajek,Jonathan Adedayo Odukoya,Ewa Mistowska,Mateusz Rozmiarek,2024-01-24 In addition to the infectious context the COVID 19 pandemic has brought many complications to social life Fear anxiety misinformation and loneliness associated with isolation as well as uncertainty about the days ahead have already caused psychological and emotional changes in many people Many social groups such as cancer patients the elderly schoolchildren and people with disabilities were particularly vulnerable to the psychosocial effects of the COVID 19 pandemic In light of current data even the WHO suggests that the psychological context of the pandemic may have caused more psychological damage than World War II Some researchers also infer the existence already of a post pandemic stress syndrome which is currently not an official medical diagnosis but rather a subtype of PTSD that is being diagnosed Also noted in the context of the pandemic is the breakdown of many social ties due to isolation loneliness the development of symptoms of depressive or

anxiety disorders and the transformation of social life Thus it seems reasonable to estimate the magnitude of phenomena of psychosocial importance resulting from the impact of the epidemiological situation associated with the COVID 19 pandemic The primary issue to be considered within the framework of the topic is the identification of psychosocial factors affecting the quality of mental and social health of various social groups which are determined by the epidemiological situation associated with COVID 19 In this view the determining variables will be personal feelings of stress fear anxiety depression discouragement alienation and loneliness and in a global sense the reference of these phenomena to the comfort and quality of social life with particular emphasis on interpersonal relationships COVID 19 as mentioned above continues to be an important social issue and although the situation related to it has recently softened and media reports becoming less frequent It is inferred that we will only now see the full impact of the problems associated with the mental health crisis and the breakdown of interpersonal relationships caused by the COVID 19 pandemic Mississippi Manufacturers Directory ,1990 PC Magazine ,1994
