years significant improvements in the traits of economic value were achieved for most of these tree species. However, the long history of domestication and the selective breeding pressure applied to their wild progenitors accelerated the loss of biodiversity, resulting in reduced genetic diversity and shrunken germplasm resources of these domesticated species. The book portrays the novel dimensions of the propitiousness of tree domestication and the interesting history behind it, which is interlaced with the development of civilizations, religions, local traditions, medicine, and cuisine. This book is of interest to teachers, researchers, biodiversity experts, and policymakers. It can be used as additional reading material for undergraduate and graduate students of forestry, ecology, genetics, and environmental sciences. The book also serves as an interesting and useful read for national and international agricultural scientists as well as historians and the general public. **Revista ciencias técnicas agropecuarias**, 1991
