modern industrial biotechnology and describes a unique collection of novel bioprocesses for a sustainable future This book  
begins in a very structured way It first looks at the modern technologies that form the basis for creating a bio based industry  
before describing the various organisms that are suitable for bioprocessing from bacteria to algae as well as their unique  
characteristics This is followed by a discussion of novel experimental bioprocesses such as the production of medicinal  
chemicals the production of chiral compounds and the design of biofuel cells The book concludes with examples where  
biological renewable resources become an important feedstock for large scale industrial production This book is suitable for  
researchers practitioners students and consultants in the bioprocess and biotechnology fields and for others who are  
interested in biotechnology engineering industrial microbiology and chemical engineering Reviews the principles  
underpinning modern industrial biotechnology Provides a unique collection of novel bioprocesses for a sustainable future  
Gives examples of economical use of renewable resources as feedstocks Suitable for both non experts and experts in the
