

6-Step Guide for Conducting Systematic Literature Review

Best Dissertation Writers

Step 1: Define the Research Question and Objectives

- The first and most crucial step in conducting a systematic literature review is to clearly define the research question and objectives.
- The research question should be specific, focused, and relevant to the topic of interest.

Step 2: Develop a Review Protocol

- The review protocol is a detailed plan that outlines the systematic review process, including the search strategy, study selection criteria, data extraction methods, quality assessment tools, and data synthesis approach.

Step 3: Conduct a Comprehensive Literature Search

- The search strategy should be designed to capture all relevant studies related to the research question, using a combination of keywords, subject headings, and Boolean operators.
- It is crucial to document the search strategy in detail, including the databases searched, the search terms used, and the date ranges covered.

Step 4: Study Selection and Data Extraction

- During the study selection process, it is important to have at least two independent reviewers assess each study to minimize bias and ensure consistency.
- Any disagreements or discrepancies between the reviewers should be resolved through discussion or by involving a third reviewer.

Step 5: Quality Assessment and Risk of Bias Evaluation

- Various quality assessment tools and checklists are available for different study designs, such as the Cochrane Risk of Bias Tool for randomized controlled trials or the Newcastle-Ottawa Scale for observational studies.
- The quality assessment should be conducted by at least two independent reviewers, and any disagreements should be resolved through discussion or by involving a third reviewer.

Step 6: Data Synthesis and Reporting

- The final step in conducting a systematic literature review is to synthesize and report the findings.
- The data synthesis process may involve a narrative synthesis, a qualitative synthesis, or a quantitative meta-analysis, depending on the nature of the included studies and the research question.
