Michael,2006-08-15 One on One Tutoring by Humans and Computers articulates the CIRCSIM Tutor project an attempt to develop a computer tutor that generates a natural language dialogue with a student Editors Martha Evens and Joel Michael present the educational context within which the project was launched as well as research into tutoring the process of implementation of CIRCSIM Tutor and the results of using CIRCSIM Tutor in the classroom The domain of this project is cardiovascular physiology specifically targeting first year medical students though the idea is applicable to the development of intelligent tutoring systems across populations disciplines and domains This 5 year long project was motivated by the belief that students need assistance in building appropriate mental models of complex physiological phenomena as well as practice in expressing these ideas in their own words to fully develop those models and experience in problem solving to use those models effectively The book outlines directions for future research and includes distinct features such as detailed studies of human one on one tutoring learning outcomes resulting from use of the tutor natural language input parsed and translated into logical form and natural language output generated using the LFG paradigm This volume will appeal to educators who want to improve human tutoring or use computer tutors in the classroom and it will interest computer scientists who want to build those computer tutors as well as anyone who believes that language is central to teaching and learning Journal of Education ,1894 *Country Guide* ,1928 The Journal of Education Thomas Williams Bicknell,Albert Edward Winship,Anson Wood Belding,1894 **Church Missionary Intelligencer and Record** ,1879

Computer Graphics in Biology Robert Ransom,Raymond J. Matela,2012-12-06 Computer graphics is being used to an increasing extent in the biological disciplines As hardware costs drop and technological developments introduce new graphics possibilities researchers and teachers alike are becoming aware of the value of visual display methods In this book we introduce the basics of computer graphics from the standpoints of both hardware and software and review the main areas within biology to which computer graphics have been applied The computer graphics literature is vast and we have not been able to give a full course on graphics techniques in these pages We have instead tried to give a fairly balanced account of the use of graphics in biology suitable for the reader with some elementary grounding in computer programming We have included extensive references both to material cited in the text and to other relevant publications One of the factors that has fuelled the increase in graphics use is the ease with which the more simple graphics techniques may be implemented on microcomputers We have therefore paid attention to microcomputer graphics as well as graphics techniques suitable for larger machines Our examples range from simple two dimensional graph plots to highly complex surface representations of molecules that require sophisticated graphics devices and mainframe computers on which to run The book is separated into two logical sections The first part concentrates on general graphics techniques giving an overview from which the reader will be able to refer to other more specialised texts as required
