Molecular cloning: a laboratory manual. Volume 3 J. Sambrook, 2001 **Membrane Protein Protocols** Barry S. Selinsky, 2008-02-03 Knowledge of the three dimensional structure of a protein is absolutely required for the complete understanding of its function The spatial orientation of amino acids in the active site of an enzyme demonstrates how substrate specificity is defined and assists the medicinal chemist in the design of specific tight binding inhibitors The shape and contour of a protein surface hints at its interaction with other proteins and with its environment Structural analysis of multiprotein complexes helps to define the role and interaction of each individual component and can predict the consequences of protein mutation or conditions that promote dissociation and rearrangement of the complex Determining the three dimensional structure of a protein requires milligram quantities of pure material Such quantities are required to refine crystallization conditions for X ray analysis or to overcome the sensitivity limitations of NMR spectroscopy Historically structural determination of proteins was limited to those expressed naturally in large amounts or derived from a tissue or cell source inexpensive enough to warrant the use of large quantities of cells However with the advent of the techniques of modern gene expression many proteins that are constitutively expressed in minute amounts can become accessible to large scale

purification and structural analysis **Measurement and Data Analysis for Engineering and Science** Patrick F. Dunn, 2005 Offering an up to date practical approach to learning and implementing lab skills technical reporting and data analysis this text also comes with a supporting website providing problem solutions and lab discussions for instructors PowerPoint slides Internet links and other resources
