

40W Power Booster/Amplifier

OWNER'S MANUAL — Please read before using this equipment.

Your RadioShack 40W Power Booster/Amplifier boosts the power output from your stereo car radio or tape player to enhance the sound of your car audio system. The booster is compact and easy to install using the supplied mounting bracket.

Be sure to read this entire manual for proper installation and operation.

If you are unsure about any part of installation, we recommend you have an automotive audio specialist install the booster. Improper wiring could damage your vehicle's electrical system.

INSTALLATION

Before you install the booster, be sure your vehicle, radio/tape player, and speakers meet the following requirements:

- The vehicle must have a 12-volt DC, negative-ground electrical system.
- The radio/tape player must be a BTL (Balanced Transformer-Less) or common-ground type.
- The speakers' total power handling capacity should be at least 40 watts. For example, if you use four 8-ohm speakers, each speaker must be able to handle at least 10 watts. If the power-handling capacity is too low, you might damage your speakers.

Connecting the Booster's Wiring

Follow these steps to connect the booster using the radio/tape player's front speaker connector.

Connection between the booster and radio/tape player's front speaker requires wire connectors available at your local RadioShack store.

1. Connect the radio/tape player's front left positive (+) speaker wire to the booster's white wire.

2. Connect the radio/tape player's front left negative (-) speaker wire to the booster's white wire with a black line.
3. Connect the radio/tape player's front right positive (+) speaker wire to the booster's gray wire.
4. Connect the radio/tape player's front right negative (-) speaker wire to the booster's gray wire with a black line.
5. Connect the booster's black ground wire to a chassis ground such as a clean, metal bolt attached to the vehicle's frame. Be sure the bolt is not insulated from the frame by a plastic part.
